# 1. CHANGE CONTROL & REVISION HISTORY

All changes to the *CAD Standards* will be documented below and incorporated into this document as the Standards may be adjusted over time. This document will be made available as appropriate each time a revision is adopted.

If the CAD Standards requires modification to accommodate a new project, new feature or data not currently defined, consultants, designers and CRAA staff may request modifications to the CAD Standards (text, requirements, layers, blocks, GIS features, GIS attributes and enumerations, etc.). The procedures and change control form below define the general framework to request and document all change requests and approved changes.

## 1.1. CHANGE CONTROL

As requests to modify Standards arise, a change control form shall be completed and signed by the GIS Supervisor of the CRAA Planning and Construction Administration Department for a change to be considered.

Using a defined process to consider all requests and a standard request form will provide a consistent process to evaluate change requests. This process will also allow CRAA to accumulate information on both adopted and rejected changes to aid long-term Standards maintenance.

Adopted changes shall be appended to this document in both electronic and hardcopy form to record the document evolution and change history. Rejected change requests shall be archived to accumulate a complete change request history to help consistently evaluate future requests and assist in consistent reasoning for rejections.

### 1.1.1. Change Control Processes and Responsibilities

#### Data Standards Maintainer Responsibilities

1. Receive informal requests for Standards Modification, complete and then print the Change Control Form and provide to the GIS Supervisor for review.
2. If the Change Request is approved after review, insert the approved Change Control Form in the Appendix to this electronic document for future reference.
3. Revise this document to include the requested change, and update the revision history table.
4. Archive all rejected change requests.

#### GIS Supervisor Responsibilities

1. Review the hardcopy Application Change Control Form.
2. Evaluate the request and document the reasons for approval or rejection.
3. Oversee the updating of the Standards

## 1.1.2. Change Control Request Form

CRAA CAD Change Control / Waiver Request Form	
<b>Date Submitted</b>	
<b>Proposed By: Name, Title, Company</b>	
<b>Contact Phone No. &amp; Email</b>	
<b>Project Name</b>	
<b>Requested Revision or Waiver Request and Applicable Section No. :</b>	
<b>Impact on Budget if not approved:</b>	
<b>Impact on Schedule if not approved:</b>	
<i>Signing this document confirms that both the Proposer and GIS Manager have agreed on the changed standards as described in this form.</i>	
<b>Proposer:</b>	
<b>Signature</b>	<b>Date</b>
<b>CRAA GIS Supervisor</b>	
<b>Signature</b>	<b>Date</b>
<b>Final Resolution: Approved as requested or as listed here</b>	

---

## 2. INTRODUCTION

### 2.1. PURPOSE

All Computer Aided Drawing and Design (CAD) data created for the CRAA must be developed and submitted according to the specifications documented in this Standard.

This includes data prepared both internally by CRAA staff and by outside organizations for work performed on behalf of Airport tenants and consultants to CRAA. The objective is to standardize design deliverables so that data and drawing files received from these multiple sources can easily be integrated into the CRAA's CAD and Geographic Information System (GIS) datasets and standardized data can be provided to consultants and the FAA as required.

Each submitted GIS data file or database and CAD drawing file will become part of the permanent archive. The GIS data and data used produce the CAD drawing serve as a critical source for updating information within the CRAA's GIS/CAD Data Warehouse.

This data and CAD drawings make up the baseline for future work at CRAA facilities. The availability of standardized data products and drawing files for use on future projects maintains the value of the original data creation effort, and produces additional value by providing an accurate basis for designing modifications to existing facilities.

The standardization of GIS/CAD data also allows drawing files and individual data layers to be integrated with other non-spatial data. This data integration improves operational efficiency and decision making by providing an accurate, complete and detailed "common operational picture" for use by all staff of the many Airport facilities, utilities and myriad support systems.

CAD data files are the primary source of data to both initially populate and update the CRAA GIS/CAD database over time. In the future, as new data and drawings sets are received, this process will only be successful if data and drawings are developed according to a consistent standard that is designed to facilitate migration of data into the GIS as the end goal.

In addition, the FAA now requires standard airport geospatial data for their own use and for sharing important information with other airports. In the past, CAD data has primarily been used for creating plan sheets and paper plots for design and construction purposes with very little "3D" elevation data except for some features to be shown in plan/profile like utilities and roadways. However, with the initiation of the FAA data requirements for 3D data to be submitted to the FAA Airports GIS (AGIS), final CAD "as-built" data must meet far more stringent geometry requirements than the typical CAD design file. This will be discussed in greater detail in Section 4.13 - GIS-Oriented Data Submittal Requirements and in the separate **CRAA GIS Data Standards**. The CRAA GIS Standards and CAD Standards are intended to define the requirements needed to support these new and ongoing data delivery requirements to the FAA.

### 2.2. SCOPE

The scope of the CAD Standard and separate GIS Data Standard is to document the requirements that will "regulate" CAD and GIS data and drawing development for the CRAA, including spatial data standards, metadata and coordinate system. It does not include other data issues that may be desired such as aerial imagery.

---

## 2.3. INTENDED AUDIENCE

This document is intended to be used by people who maintain or create GIS/CAD data for the CRAA. All CRAA staff and outside consultants should understand the requirements of this Standard and follow its specifications for the submittal of GIS/CAD Data to the CRAA.

## 2.4. REFERENCES TO PARTIES

The primary receiving party and owner of the GIS its content and the standards is referred to as the CRAA. The CRAA is the short name for the Columbus Regional Airport Authority.

The party providing GIS/CAD data is referenced as the Data Provider. This is generally going to be a party external to the CRAA whose submittals are controlled by contract, either directly with the Data Provider or through another contract (such as through an airport Tenant Lease Agreement). This Standard and its related documents are meant to be part of each CRAA contract to Data Providers and all airport contractors who may develop data to be consumed by CRAA.

For issues regarding data standards or data acceptance, the primary contact between the CRAA and Data Providers is the Design and Construction Department's GIS Supervisor.

## 2.5. RELATED DOCUMENTS

The following documents contain information that is related to this document and are referenced in the appropriate section(s). The documents listed include other standards, regulations or reference materials. This document is intended to be coupled with the CAD Layer standards, which are published in Appendix A to this document titled: "CRAA GIS/CAD Layer Standards" (aka Layer Standard). In addition to this CAD Standards document, the CRAA has developed a set of comprehensive geospatial data standards.

- *Aerial Photography Standards*
- *Subsurface Utility Engineering Standards (SUE)*
- *CAD Standards (this document)*
- *CAD Support Package – CAD Templates and Blocks*
- *GIS Data Standards – for GIS and GIS-Oriented CAD Deliverables*

The following documents are available from sources outside of the CRAA:

- *National CAD Standard (<http://www.nationalcadstandard.org>)*
- *49 CFR 1520 defines Sensitive Security Information and how it is to be handled. This document is a federal regulation that applies to all citizens of and agencies within the United States. Protection of Sensitive Security Information, United States Code of Federal Regulations, Title 49, Volume 9, Part 1520, Revised as of October 1, 2005, <http://www.gpoaccess.gov/cfr/index.html>*
- *Federal Aviation Advisory Circular AC 150/5300-18B, defines GIS and CAD data standards for airport data delivered to the FAA. Issued May 21, 2009 [http://www.faa.gov/regulations\\_policies/advisory\\_circulars/index.cfm/go/document.information/documentID/74204](http://www.faa.gov/regulations_policies/advisory_circulars/index.cfm/go/document.information/documentID/74204)*

Together, these Standards document the concepts, policies, and data creation practices necessary for the CRAA to incorporate both CAD and GIS data into the GIS Program.

---

It is the responsibility of the Data Provider to obtain the latest set of Standards referenced in this document. The Data Provider is encouraged to contact the CRAA Project Manager to facilitate obtaining these documents. The Data Provider is also encouraged to obtain the CAD Support Package which contains the electronic drawing template in AutoCAD that matches this CAD standard, and any existing “as built” electronic data which may be applicable.

## 2.6. REQUEST FOR WAIVER

Please note: **Request for waivers must only be submitted for standards contained in Section 4 of these Data Standards.** Section 5 - Graphic Standards and Specifications are recommended practices and deviations from the defined standards may be negotiated with the CRAA Project Manager directly.

Situations may arise where data should be created for the CRAA GIS that would not be consistent with this Standard. If such a situation were to arise, the party creating the data must request a waiver to this standard.

The request must define the specific section of the Standard for which the waiver is requested, the reason for the waiver, the resulting impacts on the use of the data in the GIS, and any alternative approaches that should be considered. The request will also include a detailed description of the business need for the waiver request and why adherence to this standard will prevent satisfaction of the business need. The CRAA must approve any waiver request before such data can be submitted.

## 2.7. DOCUMENT ORGANIZATION

This document is organized as follows:

1. **Revision History and Change Control.**
2. **Introduction** – purpose of and how the GIS/CAD Data Standards document is organized.
3. **Overview of GIS/CAD Standards** –background of the GIS/CAD Data Standards development.
4. **Data Standards and Specifications** – defines the required data structure and format. These standards are required to be followed unless a waiver has been granted.
5. **File & Graphic Standards and Specifications** – defines standards related to graphic appearance and data organization. These standards are suggested to be followed if possible.
6. **Appendices**

---

## 3. OVERVIEW OF GIS/CAD STANDARDS

### 3.1. ACQUIRING AND APPLYING THE STANDARDS

At the beginning of any design process that will result in the creation of GIS Data or CAD drawings, the Data Provider must obtain the latest version of this standard and the associated electronic drawing template files (CAD Support Package) from the CRAA. The Data Provider will use this standard when creating all GIS/CAD data for the project. As part of the technical review of all projects, the CRAA will review delivered drawings and data files for compliance with these standards. GIS/CAD files that do not meet this standard may be rejected by the CRAA and will need to be resubmitted until data/drawings meet Standards and is accepted by the CRAA.

**The Data Provider will acknowledge their understanding of the requirements of the applicable CAD and/or GIS Data Standards and their commitment to them by returning the Project Data Specifications Form (see Appendix A – Project Data Specifications Form to the CRAA Project Manager within 30 days of the formal Notice to Proceed date.**

Prior to construction, all drawings must be provided to the CRAA in accordance with the CRAA Contract Manual. Record and As-Built Drawings must also be provided at the conclusion of construction as indicated in the contract and in these standards (See Section 4.12).

### 3.2. CAD SUPPORT PACKAGE & TEMPLATE FILES

The CRAA has developed a set of CAD template files to assist Data Providers who are using CAD in complying with these standards. The CAD Support Package consists of the following items for AutoCAD:

Blocks and Symbols	(see Appendix E - Standard Symbols for list of blocks)
Border Sheets	(see Section 5.4.2 for Border Sheet Template definitions)
Line Types	(see Appendix D - Layer Standards for list of layers & linetypes)
Hatch Patterns	
Pen Table	(see Section 5.4.1.6 for Pen Table color standards)
Plot Styles	
Templates	

The Data Provider must obtain the latest CAD Support Package CD from the CRAA prior to beginning GIS/CAD Design work. Use of the CAD Support Package is recommended to facilitate development of GIS/CAD drawings that meet the Standards. Existing Airport data may also be provided from CRAA in the CAD Template format for Data Providers to validate and use as existing data.

#### 3.2.1. CRAA CAD Template Files

Civil_Site	Bldg_Architectural
Civil_Airfield_Elec	Bldg_Structural
Civil_Uilities	Bldg_Mech_HVAC
Civil_General	Bldg_Mech_Plumbing
	Bldg_FAA_Electrical
	Bldg_Electrial
	Bldg_General

---

### 3.3. UPDATE PROCESS

The Standards described in this document may be updated from time to time in accordance with the needs of the CRAA. Recommendations for improvements are encouraged from all parties that may create GIS/CAD files and data. Any recommendations should be submitted in writing to the CRAA GIS Supervisor, so they can be forwarded to the appropriate group for consideration.

### 3.4. GIS/CAD STANDARDS DEVELOPMENT

The CRAA CAD Standard and GIS Data Standard were created by incorporating elements of the following documents:

- **Federal Aviation Administration Advisory Circular 150/5300-18** (General Guidance and Specifications for Submission of Aeronautical Surveys to NGS: Field Data Collection and Geographic Information System (GIS) Standards). These standards are based on the older versions of the Spatial Data Standards for Facilities, Infrastructure and Environmental (SDSFIE) and National CAD Standards (below) have been expanded to better facilitate use at aviation facilities. They tend to focus on exterior (outside the building) features and are typically lacking for interior features.
- **Architectural, Engineering and Construction (A/E/C) CAD Standard.** These standards, available at [http://www.buildingsmartalliance.org/index.php/ncs?gclid=CPWe8K2c\\_qgCFcZM4AodEUONRg](http://www.buildingsmartalliance.org/index.php/ncs?gclid=CPWe8K2c_qgCFcZM4AodEUONRg), are derived from standards developed by the American Institute of Architects (AIA), the National Institute of Building Sciences (NIBS) and others which together form the U.S. National CAD Standards (<http://www.nationalcadstandard.org>). The A/E/C Standards also contain specifications for exterior features but do not tend to focus on later incorporation into a Geographic Information System (GIS) nor do they incorporate specifications for features that are of particular importance to aviation facilities. However, they do provide excellent specifications for interior features.

In case of conflicts between these two underlying Standards, these CRAA Standards will define the appropriate method to resolve the conflict. For example:

- The NCS method of layer naming will be followed for all “Demolition” layers or to describe “Phases”, rather than defining specific layers as “DEMO” or “PHS1”, “PHS2” as described in AC-18B. See Section 4.5.2.3.
- Various layer names are defined by both AC-18B and the NCS. In some cases the layer name defined in AC-18B doesn’t use the defined Major or Minor code values in the NCS. In cases of conflict the major and minor codes defined in AC-18B will be used, except if expressly noted that NCS values will be used (as in the paragraph above).

### 3.5. REQUIRED DATA STANDARDS & SUGGESTED GRAPHIC GUIDELINES

The standards described below have been divided into two sections.

**Section 4 - Data Standards and Specifications.** This section documents the Standards related to data structure and format. These standards define the data that can be used to update the GIS database. **These standards are required to be followed unless a waiver has been granted.**

---

**Section 5 – File & Graphic Standards and Specifications.** This section documents the Standards related to graphic appearance and data organization. These standards are **suggested** guidelines whereby deviations may be negotiated with the CRAA Project Manager for large projects or where the type of data or scope of work demands deviating from these standards.

---

## 4. DATA STANDARDS AND SPECIFICATIONS

### 4.1. INTRODUCTION

All of the provisions contained in this section are expected to be followed by the Data Provider in developing design information. If the Data Provider feels that it cannot effectively comply with a provision in this section, it should submit a waiver request as described in Section 3.

### 4.2. HARDCOPY PLOTS

As per the CRAA Contract Manual, hardcopy plots of the construction documents and record drawings must be provided to the CRAA as required. The Data Provider and CRAA Project Manager will jointly determine what plot sizes are required.

### 4.3. RASTER SCANNED DRAWING FILES

Two sources of scanned drawing files (raster files) exist: 1.) Plots of pure vector files to TIFF or PDF - as would typically occur when no plan markups or seals are to be affixed, and 2.) Scans of plan sheets when markups or seals are added after plotting but prior to scanning. These requirements below apply to both these types of raster files.

Plotted, scanned images of each final drawing file must be provided for incorporating into the CRAA's document management system. These drawings must be provided in TIFF or PDF format. Naming conventions for these files must follow those defined for sheet drawing files below. The files must be scanned so that they comply with the following requirements.

Raster scanned drawing files of construction plans are required only at the 100% design stage.

Raster scanned drawing files of "As-Built" drawings are required only at project completion.

Raster scanned drawing files of GIS-oriented CAD files are required at project completion.

#### 4.3.1. Scanned Image File Requirements

- All image files will be scanned at a minimum resolution of 200 dots per inch. Unless required for clarity, files should not be scanned at a resolution greater than 300 dots per inch.
- All image files must be rotated correctly.
- All areas of the image must be clear and complete. All text must be legible.
- All image files must include all required professional seals, signatures, etc.

### 4.4. GIS/CAD SOFTWARE DRAWING FILES

Both CAD and GIS data submittals to CRAA are governed by both the CAD Standard and GIS Data Standard requirements.

Drawing files in the native format of the GIS/CAD package must be provided. At the commencement of the project within 30 days following Notice to Proceed, the Data Provider must specify in the **Project Data Specifications Form** (see Appendix A – Project Data Specifications Form), **what versions of software will be used to create and deliver project data. It is the desire of CRAA that drawing files are created using the most current shipping and supported software versions of commercial off-the-shelf GIS/CAD software packages.** Data Provider who desire to submit drawings in a specific version which is not the most current version or long project duration is anticipated before final data can be delivered and software upgrades mid-project are not desired; a request for waiver must be submitted. The following software products are approved:

- **AutoCAD.** Note that it is acceptable to utilize companion products such as AutoCAD Map 3D and AutoCAD Civil 3D. Except as specifically noted below, file conversions from MicroStation/Geopak to AutoCAD are not acceptable
- **MicroStation.** Note that CRAA contracts for Data Development in AutoCAD, and will accept data products in MicroStation or MicroStation Geographics format only on an as-needed basis from other governmental agencies with prior approval from CRAA. Example: FAA, ODOT, etc.
- **Autodesk Revit.** Note that it is acceptable to utilize companion products.

Design data created in any other GIS/CAD products must be exported into a format readable in one of the approved products with no loss of data.

## 4.5. LAYER ASSIGNMENTS

### 4.5.1. Layers

CAD layers are analogous to overlays in manual drafting systems and serve to separate graphic elements (lines, shapes, and text) according to the design discipline they represent (Figure 1. Typical Layers Contained in a Sheet File).

**Figure 1. Typical Layers Contained in a Sheet File**

The types of information represented by individual layers can be grouped into two primary types: feature-specific information and sheet-specific information (Figure 2. Sheet and Feature-Specific Information).

- Feature-specific model information represents the physical form of a site, its buildings, and the items composing a building. This information is often shared between drawings. Examples include walls, doors, underground utilities, light fixtures, and building outlines. Feature-specific information may be either literal (e.g., walls) or symbolic (e.g., electrical outlets).
- Sheet-specific information may include notes, annotative symbols, and title blocks. This type of information will not be shared between drawings. To use and manipulate feature-specific and sheet-specific information effectively, every layer must be defined (standardized) by its name and its use. For individual features and their layer assignments, see Appendix D - Layer Standards and the applicable CAD templates from the CAD Support Package.

**Figure 2. Sheet and Feature-Specific Information**

### 4.5.1.1. Layer Naming Convention

The layer names for the CRAA are organized as a hierarchy. Names consist of distinct subject fields separated by dashes (“-”) to distinguish between the distinct sections of the layer names. The CRAA CAD template files are loaded with layers meant to be applicable to the type of data to be included in a particular drawing, as defined by Discipline Designators. Related layers are grouped together in the various CRAA CAD templates (e.g. HVAC, Civil, etc.). A full listing of the defined CRAA CAD layers are contained in the CAD Support Package and the layer names are listed in Appendix D - Layer Standards.

The sections of a layer name are defined as:

- **Discipline Designator** (one mandatory character and a second optional character)
- **Major Group** (four-characters)
- Two **Minor Groups** (four-characters each).

**Only the Discipline Designator, Major Group, and one Minor Group are mandatory fields.**

A **second minor group** is optional and used by the CRAA when additional detail is needed to divide features on a drawing. Submitters may also use the second minor group to establish further distinctions between layers.

An example of this is a layer name such as A-WALL-FULL-EXTR for an architectural exterior full height wall versus A-WALL-FULL-INTR for an interior full height wall.

Lastly, the optional one character **Status Indicator** field is used when appropriate.

The layer name format shown here is used by the CRAA for the level of detailed information desired (the Discipline Designator, the Major Group, and one Minor Group). All layers must be created according to this convention.

**Figure 3. Layer Naming Format**

## 4.5.2. CAD Model Files

Model files represent full-size drawings of civil/site or building elements, systems, or information (e.g., the mechanical HVAC system, the architectural floor plan, details, sections), and sheet files represent final plotted sheets. Model files are used as components in creating plotted sheet files. The information

---

contained within a model file for a discipline may be referenced by other disciplines to create the particular model files or sheet files for that discipline.

#### 4.5.2.1. Layer Assignment Tables

The layer assignment tables in the **Layer Standards** present the following:

- The layers assigned to each model file.
- A detailed description for each layer.
- The suggested presentation graphics (color/lineweight appearance) associated with each layer. This includes the line style, color, and block if necessary. **Note that the suggested graphics may be altered by the Design Team without the need for a waiver.**

#### 4.5.2.2. Annotation Layers

Note that for every discipline type, there are eight layers that are nearly the same; the only difference is that the Discipline Designator changes depending on the discipline for a model file type. The unique function of these eight annotation layers is to contain model-specific information that might not be required by other disciplines. These layers are as follows with \*\* representing a Discipline Designator (e.g., A-, C-):

\*\*ANNO-DIMS—Witness/extension lines, dimension terminators, and dimension text.

\*\*ANNO-KEYN—Reference keynotes with associated leaders.

\*\*ANNO-NOTE—General notes and remarks.

\*\*ANNO-NPLT—Non-plotting graphic information.

\*\*ANNO-PATT—Miscellaneous patterning and hatching.

\*\*ANNO-SYMB—Miscellaneous symbols.

\*\*ANNO-TEXT—Miscellaneous text and callouts with associated leaders.

\*\*ANNO-REFR—An AutoCAD user-specific layer for use in attachment of external references such as reference files.

#### 4.5.2.3. Demolition, Phasing Layers & Other Status Indicators

Layers or features to be demolished will be designated using the method described in the NCS, rather than expressly naming layers as “DEMO” as listed in AC-18B.

Data Providers must indicate layers to be demolished by following the NCS layer name method where a "status field" is appended to the layer name. See Figure 3. Layer Naming Format.

A specific one-character Status Code at the end of the layer name with a “D” value indicates “demolition”. This status indicator can be added to any layer name.

---

NOTE: The NCS also provides an alternative method of indicating layers to be demolished - a *Level 2 Discipline code with "D" value*. However, **only the Status Code field shall be used for CRAA projects to indicate features to be demolished.**

The Status Indicator field also can also be used to indicate project phases. Project Phases when appropriate to be developed are indicated with an appropriate numeric value in the Status Indicator field.

The status indicator codes provided below in Table 1. Status Indicator Codes provides appropriate values for the Status Indicator field. These codes are used in the optional Status Indicator Field to designate features to be demolished, project phases, or other status values as defined by the table below and the NCS.

**Table 1. Status Indicator Codes**

Status Indicator	Code
Abandoned	A
Existing to Demolish	D
Existing to Remain **	E
Future Work	F
Items to be Moved	M
New Work	N
Temporary Work	T
Not in Contract	X
Phase Numbers	1-9

Source: NCS Version 5

**\*\*Note** – It is assumed that all existing features will remain unless another status code indicator is present. Therefore, the “E” status code indicator will only be used in cases where it is necessary for clarity as determined by the data provider.

#### 4.5.2.4. Reference Files (Xref) and Border Sheets

A model file contains information that can be referenced by other disciplines to create other model files or final sheet files. Reference files (external references or Xref files) enable designers to share drawing information electronically through model files, eliminating the need to exchange hard copy drawings between the design disciplines. The use of reference files is a key component in the successful use of the layer assignments. To create either a model file or a final sheet file, multiple referenced model files may be required.

All reference files should be attached using the appropriate techniques so that the attachment path remains valid if the files are moved to different networks. Relative paths indicating the directory in which reference files can be found should be used as opposed to a specific hard-coded or “absolute” path.

An absolute path specifies the hierarchy of folders and includes the letter of the local hard drive letter or the network server drive letter. This specific option is the least flexible option as groups of files are transmitted from the Data Provider to CRAA and will likely be placed on different drives or in folder hierarchies. In this case, the "absolute" path will no longer be valid and the reef files will no longer be properly referenced.

Relative paths are only partially specified paths. The current drive letter and project folder path to the host drawing folder and path name is not specified; a set of periods and back slashes is used for the relative path. The number of groups indicates the hierarchy of the starting folder. This is the most flexible option and enables a set of drawings and folders to be moved from the current drive and path to a different drive and path that uses the same relative folder structure such as in the case when delivering data to CRAA.

**Example of Relative path naming:**

- ..\Xrefs\C-SP100.dwg

**NOTE:** With relative paths, the 'Save As' function to save the drawing to another folder may not properly maintain the Xref file links. Also with Xref relative paths, you cannot always successfully 'Copy and Paste' Xref's from one DWG file to another depending on the path name and hierarchy of the source and target files.

Border Files are a prime example of external model files that create a professional appearing plan set. A border model file contains border line work, the title block, project-specific text and other “standardized” plan sheet graphics.

Each discipline must use the same border model file and fill in sheet-specific information within the title block or revision block prior to printing the final sheet file (e.g., sheet number, designer names). Each discipline may use a supplemental Xref with discipline-specific information that appears on most of their sheets.

---

### 4.5.3. CAD Sheet Files and Tabs

Sheet files are the final project sheets that are intended to be plotted. A sheet file is an assembly of referenced model files plus additional sheet-specific information (e.g., north arrows, scales, section cuts, title block information).

All sheet files must be provided with each CAD data delivery. All referenced files (image files, Xrefs and special fonts if authorized, etc.) must also be included, and all reference links must be resolved so that all appropriate Xref files are loaded when the drawing file is opened.

It is up to the designer to determine whether it is more appropriate to use multiple tabs in one CAD file (.DWG) for multiple sheets, or if the type of work is more appropriate where individual plot sheets should be placed in separate CAD Sheet Files (.DWG). A Maximum of 10 tabs per sheet file is preferred if tabs are used.

#### 4.5.3.1. Common Sheet File Type Layer Assignment for Annotation

Note that ten annotation layers are the same for every discipline except the Discipline Designator changes depending on the discipline for that sheet file type. The unique function of these ten annotation layers is to contain sheet-specific information in annotation. The annotation layer naming conventions should be followed to maintain consistency throughout all the annotation layers to facilitate “harvesting” of annotation data if needed for GIS data development purposes. These layers are as follows with \*\* representing a Discipline Designator (e.g., A-, C-):

\*\*ANNO-DIMS—Sheet-specific witness/extension lines, dimension terminators, and dimension text.

\*\*ANNO-KEYN—Sheet-specific reference keynotes with associated leaders.

\*\*ANNO-LEGN—Legends and schedules.

\*\*ANNO-NOTE—Sheet-specific general notes and remarks.

\*\*ANNO-PATT—Sheet-specific miscellaneous patterning and hatching (e.g., key plan patterning).

\*\*ANNO-REDL—Redlines, markups.

\*\*ANNO-REVS—Revisions, amendments, addenda, and modifications.

\*\*ANNO-SYMB—Sheet-specific symbols (e.g., north arrow, scales).

\*\*ANNO-TEXT—Sheet-specific text and callouts with associated leaders.

\*\*ANNO-REFR—An AutoCAD user-specific layer for use in attachment of external references such as reference files.

#### 4.5.3.2. Development of Sheet Files

Data Providers must use appropriate CRAA Templates for borders and details as provided in the CAD Support Package.

---

## 4.6. STANDARD SYMBOLOGY – BLOCKS (REAL-WORLD AND GRAPHICAL)

A “block” in AutoCAD is a collection of graphical elements that can be manipulated as a single entity. Examples of typical blocks are windows, doors, graphic scale keys, furniture, etc. The use of such symbology enhances CRAA CAD productivity and provides an excellent opportunity for CAD standardization. Appendix B contains standardized block library.

Many named blocks anticipated to be needed are provided on the CAD Support Package. The standardized blocks listed in Appendix B and the CAD Support Package represent real-world features are to be used wherever possible. If custom blocks are needed to represent real-world drawing elements are not covered in this Standard, a request to use a block from either an outside source (e.g. equipment manufacturer) or a custom block created the designer themselves should be submitted to the CRAA GIS Supervisor. To be approved, the custom block must be submitted in electronic form along with a simple sheet that illustrates its use.

**Blocks that are used to represent section callout bubbles or other items used for drawing clarity that do not represent real world features (e.g. are not intended to be translated into the GIS) are not covered by this provision and are not restricted. It is expected that a Legend Sheet will be included in the plan set to illustrate the block’s proper appearance and define any abbreviations, symbols and linetypes.**

## 4.7. LINETYPE STYLES

A list the defined layers and associated linetypes for each layer is provided in Appendix D - Layer Standards. The basis for determining the various linetypes are discussed here.

AutoCAD has two basic types of linetypes: **Simple** - consisting of a combination of dots and dashes of various lengths and gaps; and **Complex** - which adds text and/or shapes to the dots, dashes and gaps. Most classes of information that consist of areas (roads, buildings, taxiways, etc.) are suitably represented in drawings with simple linetypes if they are suitably chosen and used. The bounded area can easily be further differentiated by adding a hatch or shaded pattern inside the boundary line.

Linear information is more challenging, especially when depicting aerial and buried utility lines. Because these linear features do not enclose areas, hatch patterns cannot be used to differentiate between all of the different types and sizes. Using only dashes and dots also lacks the needed capabilities to differentiate between the many different linear features at CRAA airports.

All these methods are acceptable and are to be used at the discretion of the designer:

- Add text characters and/or labels on the feature to annotate CAD line work in some fashion.
- Add an adjacent text label parallel to the line being described.
- Use leader text to point to the linear features.
- Use a library of defined complex linetypes that embeds text identifiers in the utility line itself.
- Use “mtext objects” with their background turned on and placed on top of the linear feature.

---

All of the methods have issues in an Xref drawing environment involving multiple scales. CRAA recommends using complex linetypes as a default, supplemented with **mtext objects** as needed.

One method which yields unacceptable results when converted into GIS data is to break linear features in to separate segments with text object placed in the resulting gap. This is therefore unacceptable for CRAA CAD/GIS data.

---

## 4.8. ELECTRONIC CAD FILE ORGANIZATION

Drawing sets must be organized into a logical directory structure so that the CRAA will be able to easily locate the design files. As each project and project team is different, CRAA recognizes that file structure definitions are not “one size fits all” for each type and size of project or design team.

One of the reasons for following the model and sheet file naming conventions is to minimize the number of folders. In a smaller (1 to 50 sheets) construction plan set one might use the following simple folder structure:

Project  
    Image  
    Model  
    Plots  
    Sheet

In a larger construction plan set, the main folder would be the Job Name, and any needed disciplines should be used as the second level folders, then following the simple subfolder structure listed above (Sheet/Model/Image/Plots).

Project  
    Building  
        Image  
        Model  
        Plots  
        Sheet  
    Site  
        Image  
        Model  
        Plots  
        Sheet

For very large project involving multiple designers, disciplines, phases, etc., the Data Provider should coordinate with the CRAA Project Manager to develop a data file structure that fits the project needs, and incorporates as much consistency with these standards as possible to fit the needs of CRAA data maintenance staff.

### 4.8.1. Coordination between File Name and Drawing Sheet Name

In assigning a sheet name (for use in the sheet title block, reference bubbles, etc.), the Data Provider must coordinate with the discipline name assigned to the electronic model file. As shown in Figure 4 below, the sheet code precedes the sheet sequence number prior to the dash separator. Typically, drawing sheet numbers are limited to 6 characters but more may be needed for large projects. The first character is for the single character Discipline Designators listed in Table 3 or alternatively the 2-character Level 2 Discipline Designators listed in Table 4. The next character is for the numerical Sheet Type Designator

listed in Table 6. The last three characters are for the sequential sheet number, with zeros preceding one or two digit numbers (i.e. 001 and 010).

Figure 4. Typical Border Sheet and Sheet Number

### Example of appropriate Sheet Identification Information:

SHEET TITLE: Taxiway B Paving Plan

SHEET NAME: CP-103

SHEET NUMBER : 4 of 7

## 4.9. SPATIAL COMPLIANCE

### 4.9.1. Exterior Data

Model space in a GIS/CAD drawing that primarily relates to exterior features shall be submitted in the following coordinate system: **NAD 83 Ohio State Plane, South, US Survey Feet (Decimal)**.

It is assumed that most drawings for CRAA will be based on some existing data provided by CRAA, along with template files with proper layer definitions and exterior geodetic control points included. If for

---

some reason this is not the case, the following information should be used to ensure all exterior data deliveries to CRAA include proper spatial coordinate references.

These requirements generally apply only to data provided in Site Plan sheets, Civil or Major Utility sheets, not Building Plans, Sections or Detail sheets. All site plan work including enlarged plans drawn to scale shall be georeferenced in their proper position in the AutoCAD World Coordinate System (WCS) with the assumption that the WCS is equivalent to the specified Airport survey coordinate system with default units of decimal feet.

Using AutoCAD's "assign coordinate system" (`_adesetcrdsys`) command, the coordinate system "NAD 83 Ohio State Plane, South Zone – US Foot", shall be assigned and obtained from the available coordinate systems. **Note:** "adesetcrdsys" may not be available in all versions of AutoCAD.

Two points of geodetic control shall be included in each electronic file for spatial reference; the Primary (PACS) and Secondary (SACS) monument coordinates provided by CRAA in the CAD Support Package, and available on-line from the National Geodetic Survey database

Features in drawing files that are stored in drawing units will be translated to their real world locations by applying a coordinate system. If include the PACS and SACS data is not applicable, acceptable control can include section corners, quarter section corners, and other existing airport monumentation.

State Plane coordinates exist for most section corners and for all existing monumentation points on airport premises. Geodetic control assistance can be obtained from the CRAA.

It is a requirement that the control used be referenced and shown in the plan drawing. If the point of control is located within the project limits it should be symbolically indicated and annotated in the drawing file. If the nearest control is located well outside of the project area then it should be tied to one of the other geodetic control points used, and a reference tie annotated and indicated in the design file. Any land survey information, such as basis of bearings and or any assumptions must be submitted and annotated on the drawing file.

## 4.9.2. Interior Data

GIS/CAD drawings that primarily relate to interior data shall be submitted using architectural drawing units. However, for each drawing set that contains data to be incorporated into the CRAA GIS database (e.g. outline of a new building on a site plan), the locations of at least two points of geodetic control must be included in the electronic drawing file with the coordinate values (in State Plane coordinates) for those points provided for reference. If the nearest control is located well outside of the project area then it should be tied to other known CRAA geodetic control points, and a reference tie annotated and indicated in the design file. Any land survey information, such as basis of bearings and or any assumptions must be submitted and annotated on the drawing file.

Data inside building structures may be geographically positioned within the building envelop based on the building footprint, or for the data inside the terminal or other buildings by referencing the structural column grid. For the Terminal building only, CRAA can provide a base floor map in which to work. For instance in the terminal floor plan the WCS is square to the Concourse B column grid and the basic unit is assumed to be a fractional inch. Contact the GIS Supervisor for any existing data or interior spatial coordinate grid information.

---

### 4.9.3. Rotating Data vs. Rotating View

Designers shall not use the AutoCAD “Rotate” command to spin aerial images, Xefs or other georeferenced line work out of their proper position in the WCS in project plan files.

The “Twist” option for AutoCAD’s Dview command may be used to rotate the WCS in relation to the computer screen and layout tab viewports. AutoCAD User Coordinate Systems (UCS) may be used as the designer needs to facilitate drafting in a drawing file where Dview-Twist is being used.

## 4.10. REQUIRED DISCLAIMERS FOR DATA USE AND DATA SECURITY

### 4.10.1. Proper Use of Data

Data provided by CRAA to designers and Data Providers for their use must not be relied upon as being 100% accurate and is subject to independent verification by the Data Provider if used in any design, and is subject to the following conditions:

Any electronic files (“Files”) provided by the Columbus Regional Airport Authority relating to a development project (“Project”) are provided for reference information only. Files are provided strictly for the Data Provider convenience, and the accuracy or completeness of these electronic Files is neither implied nor guaranteed. Usage of these Files shall be solely at your own risk. The sealed conformed to contract documents, not any electronic Files, are the official documents developed for the procurement of any CRAA project.

The Design Engineers and the Columbus Regional Airport Authority (CRAA) hereby disclaim any and all responsibility and liability for all claims, damages, causes of action, losses, costs, and expenses (including but not limited to attorneys’ fees) arising out of, resulting from, or relating to any and all interpretations and use of electronic Files by Data Providers for any purpose whatsoever.

It is expressly agreed and understood by the recipient of Files, that by virtue of receipt and use by recipient, to the fullest extent permitted by law, recipient thereby agrees to indemnify and hold harmless the CRAA Design Engineers who may have originally developed the electronic data, the CRAA, their respective officers, employees, representatives and affiliated companies from any and all responsibility and liability for all claims, damages, causes of action, losses, costs, and expenses (including but not limited to attorneys’ fees) arising out of, resulting from, or relating to any and all interpretations and use of these electronic Files by the Data Provider, or any other party to whom the Data Provider may supply the Files, for any purpose whatsoever. This indemnification shall extend to any and all claims arising from third parties, of whatsoever cause, and recipient shall indemnify the CRAA Design Engineers and the CRAA, their respective officers, employees, representatives and affiliated companies for same.

Any electronic Files provided by CRAA are considered the Confidential and Proprietary property of the CRAA. Copying, distribution, dissemination or publication of these Files is strictly prohibited without the express written consent of CRAA.

### 4.10.2. Security Sensitive Information

**All parties who receive electronic or hard copy drawings pertaining to CRAA properties must comply with the following CRAA Regulation, as may be amended or revised:**

§ 1520.13 Marking SSI.

---

(a) Marking of paper records. In the case of paper records containing SSI, a covered person must mark the record by placing the protective marking conspicuously on the top, and the distribution limitation statement on the bottom, of--

- (1) The outside of any front and back cover, including a binder cover or folder, if the document has a front and back cover;
- (2) Any title page; and
- (3) Each page of the document.

(b) Protective marking. The protective marking is: SENSITIVE SECURITY INFORMATION/OHIO INFRASTRUCTURE RECORD.

(c) Distribution limitation statement. The distribution limitation statement is:

WARNING: This record contains Sensitive Security Information that is controlled under 49 CFR parts 15 and 1520. No part of this record may be disclosed to persons without a "need to know", as defined in 49 CFR parts 15 and 1520, except with the written permission of the Administrator of the Transportation Security Administration or the Secretary of Transportation. Unauthorized release may result in civil penalty or other action. For U.S. government agencies, public disclosure is governed by 5 U.S.C. 552 and 49 CFR parts 15 and 1520.....INFRASTRUCTURE RECORD Section 149.433(A)(2), ORC

(d) Other types of records. In the case of non-paper records that contain SSI, including motion picture films, videotape recordings, audio recording, and electronic and magnetic records, a covered person must clearly and conspicuously mark the records with the protective marking and the distribution limitation statement such that the viewer or listener is reasonably likely to see or hear them when obtaining access to the contents of the record.

---

## 4.11. SUBMITTAL COMPLIANCE & CHECK PROCESS

CRAA has made available a CAD Support Package with CAD templates that are compliant with these standards. Data Providers are required to use the CAD Support Package and run the checks described below and others to ensure their data deliveries meet standards and will pass the submittal compliance checks by CRAA.

### 4.11.1. CAD Drawing Files

**NOTE** – Unless otherwise specified in the CRAA Data Provider contract, CRAA requires AutoCAD's .DWG format files for all CRAA CAD data deliveries, not MicroStation .DGN format. Conversions of MicroStation DGN files to AutoCAD DWG files are not acceptable.

This CRAA CAD standard does not apply to Building Information Modeling (BIM) 3D CAD data. BIM data and drawing file specifications will be addressed through the BIM Data Provider contract or other means.

All CAD drawings submitted to the CRAA will be checked for compliance with these standards. The compliance check process seeks to ensure that the formats of the submittals conform to the standards. The checks include the following activities:

- Each drawing/model will be opened in the native AutoCAD software. Any problem opening the file, missing reference files, fonts, etc. will be noted.
- Each drawing/model will be checked for extraneous layers, blocks, etc. Any deficiencies will be noted.
- Each drawing/model will be checked for spatial compliance. Any deficiencies will be noted.
- Randomly selected sheet drawings will be plotted to PDF for viewing either on the screen or on a paper printout. Any deficiencies will be noted.
- Randomly selected drawings will be reviewed to validate the appropriate data is located on the correct layer. Any deficiencies will be noted.
- A report will be generated noting the deficiencies. Note that some types of deficiencies will result in the compliance check process being terminated, and so all checks may not be performed.

If any drawing or model in the submittal fails the process, the submittal, along with the deficiency report, will be returned to the originator for resubmission.

#### 4.11.1.1. CAD Drawing File Submittal Specifications / Checklist

- Fonts – MS Windows font is required. Only include special font if a waiver has been granted.
- Custom AutoCAD .SHX files - These are sometimes used for symbols embedded in linetypes, but are discouraged for use in CRAA data as they are not incorporated into the .DWG file. If they must be used, the custom .SHX must be provided.

- 
- The CRAA CAD Support Package includes the standard CRAA .CTB pen table files. However, the designer must include the files the standard files used in submittal package in case CRAA issues upgraded versions of the standard pen table files.
  - Plot configurations for some hardware – CRAA doesn't need these files for the Data Provider's plotters.
  - Remaining Required Deliverables:
    - Sheet files –.DWG VECTOR FILES
    - All Xref files needed to support the sheet files
    - Image files (aerial images, site photos, scanned details sheets), used in the sheet files
    - Vector drawing files converted to Raster scans (PDF or TIFF)

### 4.11.2. Raster Scanned Drawing Files

All Scanned Image drawings submitted to the CRAA will be checked for compliance with these standards. See Section 4.3 Raster Scanned Drawing Files for specific technical specifications regarding acceptable file type, scanning resolution and drawing file orientation. The compliance check process will generally include the following activities:

- Randomly selected raster files will be reviewed for the image resolution. Any deficiencies will be noted.
- Randomly selected raster files will be reviewed for correct rotation (either Landscape or Portrait viewing). Any deficiencies will be noted.
- Randomly selected raster files will be reviewed for visual clarity and readability. Any deficiencies will be noted.
- Randomly selected drawings will be reviewed for required professional seals, signatures, etc. Any deficiencies will be noted.
- A report will be generated noting the deficiencies. Some types of deficiencies will result in the compliance check process being terminated as the Data Provider will need to make corrections and resubmit, and so all checks may not be performed.

If any image in the image submittal fails the process, the image submittal, along with the deficiency report, will be returned to the Data Provider for resubmission.

## 4.12. REQUIRED SUBMITTALS

There are two “types” of drawing files to be submitted. The “type” and submittal requirements for each type depend on the intended purpose of the drawing: Plan Set Drawing Files or GIS-Oriented Files.

---

### 4.12.1. CAD Data vs. GIS-Oriented CAD/GIS Data – Definitions

It is important to clarify the distinction between the two types of electronic data submittals as some requirements apply to both submittal types (e.g. Layer naming conventions), whereas additional spatial accuracy and other requirements contained in the “GIS Data Standards” only apply to the “GIS-Oriented” CAD or native GIS files.

#### **Plan Set Files – 2D Electronic Data**

- Design Sets: 30%, 60%, 90% & 100%
- Bid Set
- Conformed Plan Set
- Record Drawing Plan Set

#### **GIS-Oriented Files - 3D Electronic Data**

- Airside Site Composite File
- Landside Site Composite File
- Building Composite Files (By Levels)
- “Planning Data” (e.g. Airport Layout Plan set data)
- “Environmental Data” (e.g. Noise Contours, Environmental Samples etc.)

Other than the addition of new layer and block requirements and submittal of progress drawings for compliance checks, the submittal of CAD electronic files **for Plan Set Files** shall not undergo significant changes.

**The “As-Built” data for Civil type projects however, must undergo additional conversion to “Composite File” CAD drawings so that it can be submitted to the FAA Airports GIS. These GIS-Oriented “As-Built” files must meet criteria contained in the GIS Data Standards.**

Building Composite file submittal to FAA AGIS standards will be handled on a case-by-case basis.

### 4.12.2. CAD Plan Set Drawing File Requirements – In Progress Submittal Milestones

In compliance with the CRAA Contract Manual Requirements, progress drawings shall be submitted in their native CAD format complete (along with all required Xref and image files) at the 30%, 60%, 90% and 100% design milestones.

The CAD drawing file data must be submitted along with evidence that it does/does not fully comply with the CRAA CAD Standards. The designer shall state in the data transmittal whether or not the data fully complies with the CRAA CAD Standards, what quality assurance checks have been performed and any known non-conformance with the data that must be addressed for future data submittals.

Deficiencies noted at the 30% and 60% data submittals shall be noted for correction prior to the 100% complete data submittal stage. Data at the 100% complete stage must fully comply with these Standards. Data that does not fully comply with the standards will be rejected and required to be resubmitted after correction. Raster scanned drawing files are only required at the 100% submittal milestone.

---

### 4.12.3. GIS-Oriented Drawing File Requirements – In Progress Submittal Milestones

In compliance with the CRAA Contract Manual Requirements, As-built GIS-Oriented drawings shall be submitted in their native CAD/GIS format complete (along with all required Xref and image files) when the project is at 100% complete stage and plan data has been migrated into appropriate Composite 3D “As-Built” files.

GIS-Oriented data at the 100% complete stage must fully comply with these Standards and applicable GIS Standards. Data that does not fully comply with the standards will be rejected and required to be resubmitted after correction. Raster scanned drawing files are only required at the 100% submittal milestone.

## 4.13. GIS-ORIENTED DATA SUBMITTAL REQUIREMENTS

### 4.13.1. Overview of Converting CAD to GIS-Oriented CAD

CAD data is often a primary source of geometric feature data for GIS. However, CAD design files typically provide only “raw” geometry that requires significant conversion into an FAA-compliant GIS dataset; unless the essential “GIS” requirements for geometric construction and supporting “attribute” data are present in the CAD file.

CAD files created primarily for inclusion in GIS systems have different assumptions, needs and standard practices than those created for construction plan sets. CAD files developed for design and construction typically only need to appear correct when plotted in a bid/construction plan set. With the arrival of FAA data submittal requirements for airport CAD and GIS data, , more stringent data requirements are now required for how CAD data and drawing files are assembled if the data is eventually to be submitted to the FAA Airport GIS.

CAD files for construction plan sets are constructed with a different goal (a paper plan set), than electronic files intended to be used as spatially-correct 3D GIS features in a database.

### 4.13.2. GIS-Oriented CAD

GIS-oriented CAD is what we must differentiate from Plan-Oriented CAD. The GIS-Oriented CAD files consist of:

- Points & symbol blocks at points
- Lines (including open CAD polylines)
- Polygons (including closed CAD polylines)
- Data “attributes” are object-based, carried by **Object Data Tables** or other object characteristics defined by the CAD properties for:
  - Layer
  - Linetype
  - Block type, etc.

### 4.13.3. Plan-Oriented CAD

Plan-oriented CAD consists of these features and more, however, 3D data requirements and “connectivity” of the actual features are not typically present, and text annotations that have no direct relationship to the depicted features and are added for user comprehension/direction of the final plan.

For example, consider how to depict an area of contaminated soil to be removed – represented by a dashed line. In a CAD drawing intended for plotting, this could be represented by a closed polyline, a few open polylines, a collection of lines and arcs, or even a large number of unconnected ‘broken’ line segments placed individually along the designated boundary. All of these approaches would have the same appearance when plotted to paper. However, only the closed polygon would be valid or useful as a data object for GIS conversion.

### 4.13.4. GIS-Oriented CAD Requirements Compared to Plan Oriented CAD

Designers must understand the differences between the two types of electronic data submittal and when CAD data for a plan set must be converted to GIS-Oriented CAD for “As-Built” data submittal. The following table illustrates how CAD features must meet additional requirements to qualify as GIS-Oriented CAD data.

**Table 2. Comparison of Typical CAD Data to GIS-Oriented CAD**

Typical CAD Design/Construction File	GIS-Oriented CAD File / GIS Data
Lines must look appropriate when plotted	Intersecting lines must “snap” at vertices. Gaps or overshoots not allowed
“Polygon” features are made up of bounding lines but do not have to be “closed”	Closed polylines required to create a polygon in GIS
Lines are often broken for linetype display or to avoid text or other symbols.	Lines must be continuous between nodes
“Annotation” text placed on the plan sheet to indicate an “attribute” such as diameter or utility type	Text labels are attributes of the feature linked to CAD Object Data (GIS attributes)
Hatching used to delineate an area omitted from an area	GIS uses complex geometry (i.e. “donut hole” polygons)
Two dimensional (2D) data needed for most plans.	Three dimensional (3D) data needed for most FAA AGIS required features
Shared bounding lines used for adjacent paved areas	Discrete polygons

Many of these CAD data issues are suitable for publishing a CAD plan set that will only be viewed on paper. Requiring a fully FAA AGIS compliant “3D” data file that meets all “GIS” requirements for geometric construction and object data would needlessly increase the complexity to produce a data set that would only be viewed on paper. **Therefore, CRAA is only requiring the CAD layering standards be followed for a CAD bid/construction plan set.**

**However, As-Built GIS-Oriented CAD data that falls within the regulations for the FAA’s geospatial Advisory Circulars, must meet the CRAA GIS Data Standards for 3D data, geometric construction and object data (i.e. required attributes).**

**The very specific “GIS” data standards which apply to GIS-Oriented CAD are contained in the CRAA GIS Data Standards, Chapter 2, Chapter 3 and Appendix.**

---

## 5. FILE & GRAPHIC STANDARDS AND SPECIFICATIONS

### 5.1. INTRODUCTION

This section defines the graphic standards that are guidelines to be used for creating graphical presentation of CAD data. The standards in this section are to be followed where feasible and practical. When following these standards is not feasible or practical, the design team may collectively decide to deviate from the graphical standards only. It is suggested that any changes that impact the sheet cover page, index page, or title block be approved by the CRAA Project Manager.

### 5.2. CAD DRAWING FILE ORGANIZATION

Two distinct types of CAD files are distinguished in this standard: sheet files, which are intended for plotting plan sheets, and model files, which are files containing features and other design/drawing information. Model files are typically used in many sheet files and are usually incorporated “by reference” into the sheet files using the AutoCAD “Xref” command.

The data in the Xref files is only displayed in files to which they are attached, not permanently incorporated into the sheet file data. Examples of model files that are commonly added via Xref include the plan sheet border graphics attached to the layout tab, and drawing files of existing and proposed components of the work.

#### 5.2.1.1. Electronic CAD File Naming Conventions

Naming conventions for electronic files allow CAD users to determine the contents of a drawing without actually displaying the file. They also provide a convenient and clear structure for organizing files within project directories. CAD files should be named in accordance with the following conventions unless a waiver has been granted by the CRAA GIS Supervisor. It is important that CAD file naming follow a standard practice to facilitate the storage and retrieval of many electronic drawing files over time by CRAA staff.

#### 5.2.1.2. Model File Naming Convention

The model file naming convention is based on the National CAD Standards (NCS), Version 5.0 and has four required fields as shown below in Figure 5. Model File Naming Convention Model file naming conventions are similar to the CAD Layer naming conventions discussed earlier, but there are important differences as this discussion pertains to file names for improved file organization, whereas the layer naming refers to multiple layers contained within drawing files.

The first two-characters of the Model File name represent the **Discipline Designator**. The options for the first character in the Discipline Designator are listed below in Table 3. The first discipline designator character is required. The second character of the Discipline Designator field is either a hyphen (-), or an optional second character to further refine the discipline indicator.

The next two-character field represents the **Model File Type** (see Table 4. Model File Types). These third and fourth characters in the model file name are alphabetic characters that define the type of model, based on established model type designators.

The final four-character field is **User Defined** based on the NCS codes or user defined codes if no NCS applicable Model codes are published. The NCS defines an optional additional four character **prefix** before the Discipline Designator. **However, electronic files submitted to CRAA cannot include any optional four character prefix.**

**Figure 5. Model File Naming Convention**

The National CAD Standard lists “valid” designator values to be used in CRAA design and CAD deliverables. The Tables below show the various file naming designator codes for Discipline and Model File Types.

**Table 3. Discipline Codes**

Discipline	Designator
General	G
Hazardous Materials	H
Survey/Mapping	V
Geotechnical	B
Civil	C
Landscape	L
Structural	S
Architectural	A
Interiors	I
Equipment	Q
Fire Protection	F

Discipline	Designator
Plumbing	P
Process	D
Mechanical	M
Electrical	E
Distributed Energy	W
Telecommunications	T
Resource	R
Other Disciplines	X
Contractor/Shop Drawings	Z
Operations	O

A comprehensive listing of all possible **Level 2 discipline designator codes** are omitted here for brevity. For examples of discipline designators, refer to the National CAD Standard Uniform Drawing System *UDS Appendix A – Discipline Designators, UDS section 1.6.*

#### 5.2.1.2.1. Existing/Demolition Model File Naming

There are instances when a facility is being renovated and the as-built designs need to be revised to show demolition and new items. These revisions are made on copies of the existing as-built model files.

**Copies of as-built files can be renamed to indicate files depicting existing features to be demolished.**

A model file type, **Existing/Demolition (XD)**, has been added to the standard to allow Data Providers to indicate revisions to as-built features if this approach is most appropriate for submittal of data pertaining to numerous features “removed” in a project. This model file type can be used if needed to aid Data Providers in separating existing “to remain” data files from data files that depict existing as built features to be demolished.

#### 5.2.1.3. Sheet File Naming Convention

This section describes the Sheet file naming convention established by the National CAD Standard which CRAA has adopted and recommends be followed whenever possible. Maintaining consistency in sheet file naming between projects will aid CRAA staff efforts for data management.

However, CRAA understands that each project and each design team is unique and strict conformance to this sheet naming standard may not be appropriate for each project. Very large projects may have unique requirements which would justify deviating from this sheet file naming standard. Very small design projects or planning/environmental projects such as an Airport Layout Plan or maps of Wildlife areas submitted in CAD format may not be applicable for the NCS codes (discipline, major, minor, etc.). Data Providers should coordinate with the CRAA Project Manager if seeking approval to deviate from the Sheet file naming convention.

The sheet file naming convention (Figure 6. Sheet File Naming Convention) has five fields. The first field will be used for a 0 to 20-character Project Code which is the CRAA Project number assigned by CRAA. The next two characters are the Discipline Designator with Level 2 Designator (Table 5. Discipline Designators with Level 2 Designators). The next character is the Sheet Type Designator (Table 6. Sheet Type Designators) followed by a two-character Sheet Sequence Number (typically 01-99). The remaining three characters are user definable to better organize/group sheet data files. For large projects where sheet sequences may exceed two digits, three digit sheet sequence numbers may be used.

**Figure 6. Sheet File Naming Convention**

*Note: When more than one sheet type (such as plan, elevation, and detail) is represented in one sheet file, the dominant sheet type determines the Sheet Type Designator.*

**Table 5. Discipline Designators with Level 2 Designators**

Discipline	Designator	Description	Content
<b>General - Sheet</b>			
	G-	All General	All or any portion of subjects in the following Level 2 Designators
	GI	General Informational	Drawing index, code summary, symbol legend, orientation maps
	GC	General Contractual	Phasing, schedules, contractor staging areas, fencing, haul routes, erosion control, temporary and special requirements
	GR	General Resource	Photographs, soil borings
<b>Hazardous Materials - Sheet</b>			
	H-	All Hazardous Materials	All or any portion of subjects in the following Level 2 Designators
	HA	Asbestos	Asbestos abatement, identification, or containment
	HC	Chemicals	Toxic chemicals handling, removal or storage
	HL	Lead	Lead piping or paint removal
	HP	PCB	PCB containment and removal
	HR	Refrigerants	Ozone depleting refrigerants

Discipline	Designator	Description	Content
<b>Survey/Mapping - Sheet</b>			
	V-	All Survey/Mapping	All or any portion of subjects in the following Level 2 Designators
	VA	Aerial Survey	
	VF	Field Survey	
	VH	Hydrographic Survey	
	VI	Digital Survey	
	VU	Combined Utilities	
<b>Geotechnical - Sheet</b>			
	B-	All Geotechnical	
<b>Civil - Sheet</b>			
	C-	All Civil	All or any portion of subjects in the following Level 2 Designators
	CD	Civil Demolition	Structure removal and site clearing
	CS	Civil Site	Plats, dimension control
	CG	Civil Grading	Excavation, grading , drainage, erosion control
	CP	Civil Paving	Roads, driveways, parking lots
	CI	Civil Improvements	Pavers, flagstone, exterior tile, furnishings, retaining walls, and water features
	CT	Civil Transportation	Waterways, wharves, docks, trams, railways, airfields, and people movers
	CU	Civil Utilities	Water, sanitary sewer, storm sewer, power, communications, fiber optic, telephone, cable television, natural gas, and steam systems
<b>Landscape - Sheet</b>			
	L-	All Landscape	All or any portion of subjects in the following Level 2 Designators
	LD	Landscape Demolition	Protection and removal of existing landscaping
	LI	Landscape Irrigation	
	LP	Landscape Planting	
<b>Structural - Sheet</b>			
	S-	All Structural	All or any portion of subjects in the following Level 2 Designators
	SD	Structural Demolition	Protection and removal
	SS	Structural Site	
	SB	Structural Substructure	Foundations, piers, slabs, and retaining walls
	SF	Structural Framing	Floors and roofs
<b>Architectural - Sheet</b>			
	A-	All Architectural	All or any portion of subjects in the following Level 2 Designators
	AD	Architectural Demolition	Protection and removal
	AS	Architectural Site	
	AE	Architectural Elements	General architectural
	AI	Architectural Interiors	
	AF	Architectural Finishes	
	AG	Architectural Graphics	

Discipline	Designator	Description	Content
<b>Interiors - Sheet</b>			
	I-	All Interiors	All or any portion of subjects in the following Level 2 Designators
	ID	Interior Demolition	
	IN	Interior Design	
	IF	Interior Furnishings	
	IG	Interior Graphics	Murals and visuals
<b>Fire Protection - Sheet</b>			
	F-	All Fire Protection	All or any portion of subjects in the following Level 2 Designators
	FA	Fire Detection and Alarm	
	FX	Fire Suppression	Fire extinguishing systems and equipment
<b>Plumbing - Sheet</b>			
	P-	All Plumbing	All or any portion of subjects in the following Level 2 Designators
	PD	Plumbing Demolition	Protection, termination, and removal
	PS	Plumbing Site	Extensions and connections to Civil Utilities
	PP	Plumbing Piping	Piping, valves, and insulation
	PQ	Plumbing Equipment	Pumps and tanks
<b>Mechanical - Sheet</b>			
	M-	All Mechanical	All or any portion of subjects in the following Level 2 Designators
	MD	Mechanical Demolition	Protection, termination, and removal
	MS	Mechanical Site	Utility tunnels and piping between facilities
	MH	Mechanical HVAC	Ductwork, air devices, and equipment
	MP	Mechanical Piping	Chilled and heated water, steam
	MI	Mechanical Instrumentation	Instrumentation and controls
<b>Electrical - Sheet</b>			
	E-	All Electrical	All or any portion of subjects in the following Level 2 Designators
	EA*	Electrical Airfield Lighting and NAVAIDs	Visual air navigation systems
	ED	Electrical Demolition	Protection, termination, and removal
	ES	Electrical Site	Exterior electrical systems (power, lighting, telecommunications, auxiliary)
	EP	Electrical Interior Power	Interior power
	EL	Electrical Interior Lighting	Interior lighting
	EI	Electrical Instrumentation	Controls, relays, instrumentation, and measurement devices
	ET	Electrical Interior Telecommunications	Interior telecommunications (telephone, network, voice and data cables)
	EY	Electrical Interior Auxiliary Systems	Interior auxiliary (alarms, nurse call, security, CCTV, PA, music, clock, and program)

Discipline	Designator	Description	Content
<b>Telecommunications - Sheet</b>			
	T-	All Telecommunications	All or any portion of subjects in the following Level 2 Designators
	TD	Telecommunications Demolition	Protection, termination, and removal
	TN	Data Networks	Network cabling and equipment
	TT	Telephone	Telephone systems, wiring, and equipment
<b>Other Disciplines</b>	X		

Sheet type designators are also used to indicate how the various datasets are presented in a defined view or layout method. These designators help users to easily lookup of similar types of views for dissimilar datasets (e.g. Section drawings for structure members and HVAC piping when they are on different plan sheets).

**Table 6. Sheet Type Designators**

Sheet Type	Designator
General (symbols legend, notes, etc.)	0
Plans (horizontal views)	1
Elevations (vertical views)	2
Sections (sectional views)	3
Large Scale Views (plans, elevations, or sections that are not details)	4
Details	5
Schedules and Diagrams	6
User Defined	7
User Defined	8
3D Representations (isometrics, perspectives, photographs)	9

## 5.3. DETAIL AND SCHEDULE SHEET STANDARDS

CRAA does not define standards for detail and schedules sheets/files that differ from the National CAD Standards (NCS). Data Providers instead should follow appropriate file naming conventions defined above and in NCS version 5 for any questions relating to detail sheets and schedule sheets file naming and sheet naming.

## 5.4. GRAPHIC CONCEPTS

### 5.4.1. Presentation Graphics

The first step in establishing an effective CAD standard is the development of a uniform approach to presentation graphics. Presentation graphics typically consist of drawing elements such as lines, arcs, shapes, text, and their characteristics (line color, line width, and line style). This section presents brief overviews of the characteristics of suggested presentation graphics and the philosophy used to standardize them.

---

### 5.4.1.1. Line Widths

Varied line widths substantially improve readability of hardcopy CAD drawings. For the majority of drawings, the five line widths defined in Table 7 with the optional 0.040 in, 0.055 in, and 0.079 in lines, are considered sufficient and should not be expanded unless an appreciable improvement in drawing clarity or contrast can be realized.

**Table 7. Line Thickness Designations**

Line Thickness	Technical Pen Designation	in.
Fine	0000	0.007
Thin	000	0.010
Medium	0	0.014
Wide	1	0.020
Extra Wide	2.5	0.028
Option 1	3.5	0.040
Option 2 <sup>3</sup>	n/a	0.055
Option 3 <sup>3</sup>	n/a	0.079

The following are typical uses for the line widths shown in Table 7 Comparison of Line Widths

- **Fine (0.007 in).** Fine lines should be used sparingly, mostly for poche/patterning (this line thickness typically does not reproduce well in photocopies).
- **Thin (0.010 in).** Thin lines should be used for depicting dimension lines, dimension leader/witness lines, note leader lines, line terminators (arrowheads, dots, and slashes), phantom lines, hidden lines, center lines, long break lines, schedule grid lines, and object lines seen at a distance.
- **Medium (0.014 in).** Medium lines should be used for depicting minor object lines, dimension text, text for notes/callouts, and schedule text.
- **Wide (0.020 in).** Wide lines should be used for major object lines, cut lines, section cutting plane lines, and titles.
- **Extra wide (0.028 in).** Extra wide lines should be used for minor title underlining, schedule outlines, large titles, and object lines requiring special emphasis. For very large scale details drawn at 3" = 1' – 0" or larger, the extra wide width should be used for the object lines. Extra wide widths are also appropriate for use as an elevation grade line, building footprint, or top of grade lines on section/foundation details.
- **Option 1 (0.040 in).** This line weight should be used for major title underlining and separating portions of drawings.
- **Option 2 (0.055 in).** This line weight should be used for border sheet outlines, cover sheet line work, and as an option for the designer as required.
- **Option 3 (0.079 in).** This line weight should be used for border sheet outlines, cover sheet line work, and as an option for the designer as required.

### 5.4.1.2. Screen Colors

The primary reason to use color in CAD drawings is to improve the clarity of the drawing on a computer monitor or when plotted. CRAA requires plots use a standard pen table for plotting which is available in the CAD Support Package. Users can establish whatever screen color settings appropriate for their work. See Table 8. Screen Color Definitions.

*Note: These colors are best viewed on a monitor with a black background.*

**Table 8. Screen Color Definitions – CRAA Pen Table Definitions**

Color	Pen Size		% Screen	Alternate Colors
	mm	in.		
1	0.25	0.010	100	11,21,31,41...241
2	0.35	0.014	100	12,22,32,42...242
3	0.50	0.020	100	13,23,33,43...243
4	0.70	0.028	100	14,24,34,44...244
5	1.00	0.039	100	15,25,35,45...245
6	1.40	0.055	100	16,26,36,46...246
7	0.18	0.007	100	17,27,37,47...247
8	0.10	0.004	100	18,28,38,48...248
9	0.35	0.014	30	19,29,39,49...249
10	0.50	0.020	30	20,30,40,50...250
251	By Object		50	
252	By Object		20	
253	By Object		10	
254	By Object		5	
255	By Object		0	

### 5.4.1.3. Hatch Patterns

Hatching applied on pattern layers (i.e. listed in Appendix D - Layer Standards with the minor group in the layer name of PATT) is recommended as a means of filling in areas on CAD drawings. Any hatch pattern can be used. Care should be taken to ensure that hatch patterns are not so dense that line work or annotations below or on top of the hatching become unreadable.

### 5.4.1.4. Use of Wipeouts in AutoCAD Prohibited

AutoCAD has a tool that allows a Data Provider to create “wipeouts”. This tool can be used to wipeout background information under an object to clarify the plotted look. Unfortunately, unfavorable results happen when creating PDF’s of a drawing that contains wipeouts. Typically the wipeouts get plotted as blackouts. **Due to this problem, wipeouts are not to be used.**

Instead, a layer/color combination can be created to be used in place of wipeouts. Assign color 255 which has a “0” screening value to the wipeout layer. The Data Provider can create solid fill hatching on that layer and the result will work like wipeouts. Draw order commands can be used as needed to generate the desired output.

---

#### 5.4.1.5. Text Styles/Fonts

CRAA has selected **Verdana** as the default annotation font as this font is typically installed on most computers as a default Windows True Type font, and Arial for the default Border Sheet font for contrast.

Verdana was designed to be readable at small sizes. Additionally, the lack of serifs, large x-height, wide proportions, loose letter-spacing and emphasized distinctions between similarly-shaped characters are chosen to increase legibility. Examples of distinction between similarly spaced characters are: (Verdana) lower case "l", Capital "l", lower case "i" and the number "1").

Contrasting text styles are used within a drawing to delineate types of information.

In CRAA deliverable CAD drawings, only the Verdana font shall be used. However, the Verdana font may be modified in size, color or style (bold, italics, underline, outline, etc.) as needed by the data provider for additional emphasis or deemphasize. Only Verdana True Type Font available through a standard MS Windows program is permitted. No special Verdana font downloads are permitted as they will not be "universal" on every PC.

#### 5.4.1.6. Plotting Colors - CRAA Standard Pen Table (.CTB File)

Printers and plotters are controlled by files called pen tables (or feature tables). These files (tables) convert thicknesses and/or color in an electronic file to line thicknesses on a paper drawing.

By employing the standard CRAA pen table, the Data Provider can ensure that consistent drawings are produced from an electronic file regardless of the type of printer or plotter used. Required standard pen tables have been provided as part of the CAD Support Package. See Section 5.4.1.2.

### 5.4.2. Border Sheets

#### 5.4.2.1. Standard Sheets

Standardized versions of standard Cover sheets, Index sheets, and Borders with Title Blocks are included in the CAD Support Package and should be requested by the Data Provider at the beginning of work on each design project.

#### 5.4.2.2. Sheet Sizes

Except as noted below, all CAD drawings for a project will be prepared on A1 sheets in accordance with the ISO sheet size shown in Table 9. ANSI and Architectural Sheet Size Definitions, which also shows American National Standards Institute (ANSI) equivalents. The ISO A0 sheet is recommended for large maps (for example, airport master plans and drawings for civil works projects). All documents that are not engineering drawings will be prepared on ISO A4 sized sheets. The sheet sizes to be used on specific projects should be established in conjunction with the CRAA Project Manager for each project. Smaller sheet sizes may be used in certain circumstances if specified in writing by the CRAA.

---

**Table 9. ANSI and Architectural Sheet Size Definitions**

ANSI Sheets	
Letter	in.
A	8.5 x 11.0
B	11.0 x 17.0
C	17.0 x 22.0
D	22.0 x 34.0
E	34.0 x 44.0
Architectural Sheets	
Letter	in.
A	9 x 12.0
B	12.0 x 18.0
C	18.0 x 24.0
D	24.0 x 36.0
E	36.0 x 48.0
E1	30.0 x 42.0

#### 5.4.2.3. Cover and Index Sheets

Each set of drawings will include a cover sheet and one or more index sheets (these may be combined for small drawing sets). The content and layout of the cover and index sheets is project specific. All text provided on the cover and index sheets must be of such size that it will be legible if the drawings are reduced to ½ size.

#### 5.4.2.4. Typical Sheet Title Block

The standard CRAA plan sheet layout is a horizontal landscaped orientation with the various title blocks arranged along the bottom of the sheet, also in a horizontal arrangement. The exact arrangement of the various title blocks differ slightly depending on the sheet size. The CRAA CAD Support Package contains templates in the various ANSI and ARCH sizes as defined above.

A typical drawing layout is shown in Figure 7. Typical Sheet Border & Title Block. Each title block includes the following data blocks:

- Designer Identification block
- Revision block
- Owner block
- Index and Notes block
- Sheet Identification block

*Designer Identification Block    Revision Block    Owner Block    Project & Sheet Information Block*

**Figure 7. Typical Sheet Border & Title Block**

*5.4.2.4.1. Designer Identification Block*

The designer identification block (Figure 8. Designer Identification Block) contains the logo or name of the agency that designed the sheet. This space will also accommodate professional seals when required.

Directly above the Designer Identification Block is the Percent Submittal Designation to indicate the stage of the drawing development.

**Figure 8. Designer Identification Block**

#### 5.4.2.4.2. Revision Block

The revision block (Figure 9. Revision Block) contains a history of revisions, addenda, and/or clarifications to the sheet. The first entry should be placed on the upper row of the issue revision block and subsequent entries should be made below it.

REVISION NO.	REVISION DATE	DESCRIPTION
###	01-01-12	IDENTIFY REVISION

**Figure 9. Revision Block**

#### 5.4.2.4.3. Project & Sheet Information Block

The Project & Sheet Information Block (Figure 10. Sheet Identification Block) contains general information about the project (Project Title and CRAA Project Number) the sheet (Sheet Title, Sheet number, Scale and date). The sheet identifier is comprised of the discipline designator, the sheet type designator, and the sheet sequence number as described in the Electronic File Naming Conventions section of this document. The sheet number listing can contain either the total number of sheets for the entire project drawing set or the number of sheets for that particular discipline designator.

PROJECT TITLE AIRPORT CODE AND NAME OF PROJECT		PROJECT NO. CMH0001
SHEET TITLE DESCRIPTIVE SHEET TITLE		SHEET NAME G-000
SCALE 1" = 1'-0"	DATE 01-01-12	SHEET NO. 00 OF 000

**Figure 10. Sheet Identification Block**

#### 5.4.2.4.4. Use of Blocks to Store Attributes about the Sheet

Drawing submitters are permitted to establish AutoCAD blocks which contain attributes for the border sheet items described above. This provides an efficient way to change the graphical elements described above when the values of attributes such as sheet number and title change.

### 5.4.3. Drawing Scales

Typical drawing scales for English measurements are indicated in Table 10. Drawing Scales below.

**Table 10. Drawing Scales**

Drawing Type	Civil ( Decimal Units) Where 1 AutoCAD unit equals 1 decimal foot	Architectural (Inch) Where 1 AutoCAD unit equals 1 inch
Site plans	1" = 20'	1" = 20' - 0"
	1" = 30'	1" = 30' - 0"
	1" = 40'	1" = 40' - 0"
	1" = 50'	1" = 50' - 0"
	1" = 60'	1" = 60' - 0"
	1" = 100'	1" = 100' - 0"
	1" = 200'	1" = 200' - 0"
	1" = 400'	1" = 400' - 0"
	1" = 500'	1" = 500' - 0"
	1" = 1000'	1" = 1000' - 0"
	1" = 2000'	1" = 2000' - 0"
	Floor plans	na
na		1/8" = 1' - 0"
na		1/16" = 1' - 0"
Reflective ceiling plans	na	1/4" = 1' - 0"
	na	1/8" = 1' - 0"
	na	1/16" = 1' - 0"
Roof plan	na	1/16" = 1' - 0"
Exterior elevations	na	1/16" = 1' - 0"
	na	1/8" = 1' - 0"
Interior elevations	na	1/8" = 1' - 0"
	na	1/4" = 1' - 0"
Cross sections	1" = 5'	1/8" = 1' - 0"
	1" = 10'	1/4" = 1' - 0"
	1" = 50'	1/16" = 1' - 0"
	1" = 100'	
Wall sections	1/2" or 3/4" = 1' - 0"	1/2" or 3/4" = 1' - 0"
Stair details	1" or 1-1/2" = 1' - 0"	1" or 1-1/2" = 1' - 0"
Details	3" = 1' - 0"	3" = 1' - 0"
	1" or 1-1/2" = 1' - 0"	1" or 1-1/2" = 1' - 0"

# APPENDIX A – PROJECT DATA SPECIFICATIONS FORM

## APPENDIX B – REQUIREMENT REFERENCE / DATA CHECKLIST

<i>CHAPTER / SECTION</i>	<i>REQUIREMENT</i>
<b>CAD STANDARDS</b>	
<b>2.1</b>	Submitted data complies with CRAA CAD Standard.
<b>3.2</b>	CRAA CAD Support Package obtained.
<b>4.3</b>	Raster scanned drawings provided in the proper format and at various data submittal stages.
<b>4.4</b>	Project Data Specifications Form submittal to CRAA required at start of project – within 30 days of Notice to Proceed date. Specifies what software versions and electronic data deliverable formats are planned. See Appendix __ for this form.
<b>4.5.1.1</b>	Layer names follow the CRAA naming convention either by using existing CRAA defined layers or a waiver has been requested and granted to add a new layer name to the CRAA standard.
<b>4.5.2</b>	Electronic CAD Model Files follow the CAD Standard for annotation layers, status indicators and Externally Referenced (Xref) files.
<b>4.6</b>	Only CRAA supplied or approved Blocks are used.
<b>4.7</b>	CRAA Linetype styles are used unless at the discretion of the designer other linetypes defined in the CAD Standard are used.
<b>4.8</b>	Electronic CAD files are provided in a file structure with the hierarchy matching that defined in the CAD Standard or as otherwise approved in advance by CRAA for a project with special data needs.
<b>4.9</b>	All electronic CAD and GIS-Oriented CAD data provided to CRAA will comply with Spatial Data requirements for both Civil (outside of the building) and Building data (terminal only).
<b>4.11</b>	All electronic CAD and GIS-Oriented CAD data provided to CRAA has been checked for compliance with the CAD and GIS Data Standards and meets all required standards. Specifications include: fonts, blocks, plotting using CRAA pen table, Xref files, proper raster scans, etc.
<b>4.12</b>	Electronic data for both CAD Plan data and CAD GIS-Oriented/GIS Data is submitted to CRAA at the proper stages.

<b>4.13</b>	Final “As-Built” Data is submitted in 3D form and meets all applicable requirements for GIS-Oriented CAD Data. <b>Also see <u>GIS Data Standards</u>.</b>
<b>5.2</b>	CAD Drawing Files (Model Files and Sheet Files) are properly names and organized and all Xref files are appropriately named and organized following the CRAA CAD Standard for file naming.
<b>5.3</b>	Detail and Schedule sheets are prepared following National CAD Standard guidance. CRAA does not define specifications for Details or Schedule Sheets in the CRAA CAD Standards.
<b>5.4</b>	All presentation graphics follow the guidelines defined in the CRAA or following the standards, the designer has modified how the data appears for plotting purposes as appropriate.
<b>5.4.1.5</b>	Text Styles for annotation are Verdana only. Border template file fonts are set using Arial and should not be changed.
<b>5.4.1.6</b>	The Standard CRAA .CTB Pen Table shall be used to control the plan plotting styles.
<b>5.4.2</b>	Only standard sheet sizes and CRAA Border template files shall be used. See CAD Support Package for these template files.
<b>GIS DATA STANDARDS (Applicable to GIS Data/GIS-Oriented CAD Data)</b>	
<b>2.3</b>	GIS Data shall be properly formatted for delivery to CRAA.
<b>2.4</b>	For GIS Data submitted in GIS Database, all data must meet the requirements set forth in this Section.
<b>2.5</b>	For GIS Data submitted to CRAA, all data must meet the Coordinate System requirements set forth in this Section.
<b>2.6</b>	For GIS Data submitted to CRAA, all data must meet the Metadata requirements set forth in this Section.
<b>3</b>	For GIS Data submitted to CRAA, all data must meet the Data Delivery and Acceptance specifications and procedures set forth in this Section.

## APPENDIX C – CAD/GIS RELATED TERMS

	Definition
ArcGIS	A collection of Geographic Information System software product lines produced by ESRI, composed of ArcInfo, ArcEditor, and ArcView.
ArcGIS Server	A GIS web Map Server, produced by ESRI, which facilitates sharing of GIS data across the Internet or within an Intranet.
ArcMap	The central application in ArcGIS Desktop for all map-based tasks including cartography, map analysis, and editing.
ArcSDE	An application server that facilitates storing and managing spatial data (raster, vector, and survey) in a database management system. Makes this data available to many applications.
Attribute data	Descriptive data of a system feature, such as manufacturer, size, or material.
AutoCAD	A suite of CAD software products for 2- and 3-dimensional design and drafting developed and sold by Autodesk.
Data model	The logical data structure developed during the database design process. It is a description of the structural properties that define all entities represented in a database and all the relationships that exist among them.
Enterprise GIS system	A GIS that integrates geographic data across multiple departments or divisions and serves the entire organization. Provides access to other information systems in the organization by using a map or application as the integrator of the organization's information.
ESRI	Environmental Systems Research, Inc., of Redlands, California. Producer of ArcGIS family of products.
External reference	Xref – files such as border sheets or images that are shown in an AutoCAD file by externally referencing the data rather than having the data reside in the current drawing file.
Geodatabase	A database for spatial and tabular geographic data.
GIS	Geographic Information System. A system that integrates tabular system data with a spatial representation.
Metadata	Detailed information about the dataset—how it was created and by whom. Accuracy and completeness descriptions.
MicroStation	A CAD drafting software by Bentley Microsystems. Not currently used by CRAA.
National CAD Standard	(NCS) Version 5 is currently the CRAA adopted version. NCS is collaboration between the American Institute of Architects and National Institute of Building Sciences to create a unified approach to CAD software design.
Object data	A method by which some versions of AutoCAD (Map/Civil 3D) store attribute data about AutoCAD entities. Not all versions of AutoCAD use Object Data.
Orthophotograph	An aerial photograph that shows images of ground features in their true map positions.
Planimetric data	A map that represents the horizontal position of features such as boundaries, fences, streets, and structures.
Raster data	A raster data structure is usually a rectangular, square-based “gridding” of a 2D plane into cells. Some raster datasets contain elevation data but most are “flat”. Raster data typically isn't scalable.
Shapefile	The Esri shapefile is a popular geospatial vector data format for use in GIS software. Shapefile store geometric information as points, lines or polygons and potentially some attribute information about each in a tabular format.
Spatial data	Information about the location, shape, and relationships among geographic features, usually stored as coordinates and topology.
SQL Server	A relational database management system (RDBMS) produced by Microsoft.
Tabular data	Non-spatial descriptive data of system features often captured in spreadsheets, databases, or hardcopy sources.
Vector data	Vector data consists of geometric features such as points, lines, curves, and shapes or polygon(s), which are all based on mathematical expressions, to represent more complex geometric shapes. Vector data is scalable.

## APPENDIX D - LAYER STANDARDS

Row No.	Layer Name	Description	Color	Line Type	Template	Layer in 2 Templates
1	A-ANNO-DIMS	Witness/Extension Lines, Dimension Terminators, Dimension Text	1	CONTINUOUS	Bldg_General	
2	A-ANNO-KEYN	Reference Keynotes with Associated Leaders	2	CONTINUOUS	Bldg_General	
3	A-ANNO-LEGN	Legends and Schedules	21	CONTINUOUS	Bldg_General	
4	A-ANNO-MATC	Match Lines	5	CONTINUOUS	Bldg_General	
5	A-ANNO-NOTE	General Notes and Remarks	22	CONTINUOUS	Bldg_General	
6	A-ANNO-NPLT	Non-plotting Graphic Information	211	CONTINUOUS	Bldg_General	
7	A-ANNO-PATT	Miscellaneous Patterning and Hatching	8	CONTINUOUS	Bldg_General	
8	A-ANNO-REDL	Redlines and Markups	41	CONTINUOUS	Bldg_General	
9	A-ANNO-REFR	Reference files	7	CONTINUOUS	Bldg_General	
10	A-ANNO-REVS	Revision Clouds and Symbols	42	CONTINUOUS	Bldg_General	
11	A-ANNO-SITE-OTLN	Key Plan	27	CONTINUOUS	Bldg_General	
12	A-ANNO-SYMB	Miscellaneous Symbols	61	CONTINUOUS	Bldg_General	
13	A-ANNO-TEXT	Miscellaneous Text and Callouts with Associated Leaders	62	CONTINUOUS	Bldg_General	
14	A-ANNO-TTLB	Title Block	82	CONTINUOUS	Bldg_General	
15	A-AREA-IDEN	Room numbers, tenant identifications, area calculations	81	CONTINUOUS	Bldg_Architectural	
16	A-AREA-LINE	Area Calculation Boundary	101	CONTINUOUS	Bldg_Architectural	
17	A-AREA-OCCP	Occupant or employee names	121	CONTINUOUS	Bldg_Architectural	
18	A-AREA-PATT	Area cross hatching	28	CONTINUOUS	Bldg_Architectural	
19	A-BAGS-BELT	Baggage system belt	141	CONTINUOUS	Bldg_Architectural	
20	A-BAGS-BGRD	Baggage system belt guard	161	CONTINUOUS	Bldg_Architectural	
21	A-BAGS-BTRK	Baggage system belt track	181	CONTINUOUS	Bldg_Architectural	
22	A-BAGS-CARR	Baggage system claim carousel	201	CONTINUOUS	Bldg_Architectural	
23	A-BAGS-CART-RACK	Baggage Cart Rack	221	CONTINUOUS	Bldg_Architectural	
24	A-BAGS-CATH	Baggage system catwalk hatch	241	CONTINUOUS	Bldg_Architectural	
25	A-BAGS-CATW	Baggage system catwalk	11	CONTINUOUS	Bldg_Architectural	
26	A-BAGS-CHAI	Baggage system chain	31	CONTINUOUS	Bldg_Architectural	
27	A-BAGS-CHAN	Baggage system channel	51	CONTINUOUS	Bldg_Architectural	

Row No.	Layer Name	Description	Color	Line Type	Template	Layer in 2 Templates
28	A-BAGS-CONV	Baggage Conveyor	71	CONTINUOUS	Bldg_Architectural	
29	A-BAGS-CVFL-INBD	Baggage system conveyor, at floor, Inbound	91	CONTINUOUS	Bldg_Architectural	
30	A-BAGS-CVFL-OTBD	Baggage system conveyor, at floor, Outbound	111	CONTINUOUS	Bldg_Architectural	
31	A-BAGS-CVL1-INBD	Baggage system conveyor, 1st level below, Inbound	131	CONTINUOUS	Bldg_Architectural	
32	A-BAGS-CVL1-OTBD	Baggage system conveyor, 1st level below, Outbound	151	CONTINUOUS	Bldg_Architectural	
33	A-BAGS-CVL2-INBD	Baggage system conveyor, 2nd level below, Inbound	171	CONTINUOUS	Bldg_Architectural	
34	A-BAGS-CVL2-OTBD	Baggage system conveyor, 2nd level below, Outbound	191	CONTINUOUS	Bldg_Architectural	
35	A-BAGS-CVL3-INBD	Baggage system conveyor, 3rd level below, Inbound	231	CONTINUOUS	Bldg_Architectural	
36	A-BAGS-CVL3-OTBD	Baggage system conveyor, 3rd level below, Outbound	1	CONTINUOUS	Bldg_Architectural	
37	A-BAGS-CVU1-INBD	Baggage system conveyor, 1st level above, Inbound	21	CONTINUOUS	Bldg_Architectural

DBLDRUNEVR72	Double Door - Uneven (Right) 72"
DFPROJ	Drinking Fountain, Projecting Type
DFRECS	Drinking Fountain, Recessed Type
DFSREC	Drinking Fountain, Semi-Recessed Type
DOORID	Door Opening Identifier
DOR18L	Left Door, 180 Degree Swing
DOR18R	Right Door, 180 Degree Swing
DORBFL	Left Bifold Door
DORBFR	Right Bifold Door
DORCPV	Door Center Pivot
DORCYL	Cylindrical Door
DORDBL	Left Double Door
DORDBR	Right Double Door
DORDEL	Left Double Egress Door

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
DORDER	Right Double Egress Door
DORFSL	Left Single Full Swing Door
DORFSR	Right Single Full Swing Door
DOROVH	Overhead Door
DORPOC	Door Pocket
DORRUP	Roll Up Door
DORSHL	Left Single Hinged Door
DORSHR	Right Single Hinged Door
DORSLD	Sliding Door
DORSLS	Sliding Surface Door
DORSPL	Left Single Pivot Door
DORSPR	Right Single Pivot Door
DORUDL	Left Uneven Double Door
DORUDR	Right Uneven Dbl. Door
DSHWSH	Commercial Dishwasher
EQPMID	Equipment Identifier
FASTEN	Fastener
FLRRPL	Flooring, Resilient Plastic Laminate
FURCHH	Furring Channel Hat
FURCHN	Furring Channel
GLASLS	Large Scale Glass
GLASSS	Small Scale Glass
GLBLLS	Glass Block, Large Scale
GLBLSS	Glass Block, Small Scale
GLELEV	Glass Elevation
GPLANK	Gypsum Plank
GYPBLK	Gypsum Block
GYPPOM	Gypsum Plaster on Masonry
GYPPPB	Gypsum Plaster Particle Board
GYPSP	Gypsum Solid Plaster Partition
GYPWBD	Gypsum Wallboard Finishes
INFBSS	Small Scale Flexible Blanket Insulation
INLFLS	Large Scale Loose Fill Insulation
INS1RM	Insulation, Reflective Metal On 1 Side
INS2RM	Insulation, Reflective Curtain 2 Sides (Sm. Scale)
INSFOM	Spray Foam Insulation
INSTND	Insulation, Type Not Determined (Lg. Scale)
LAVBCK	Back Lavatory
LAVCOR	Corner Lavatory
LAVCOU	Lavatory in Counter
LAVDNT	Dental Lavatory
LAVHND	Handicapped Lavatory
LAVINT	Integral
LAVMDM	Med. Manicure Lavatory
LAVOVCT	Oval - Countertop
LAVPED	Pedestal
LAVRECCT	Rectangular - Countertop
LAVSLB	Slab Type Lavatory
LAVWM	Wall Mount
LINTEL	Concrete Beam Bond Lintel
MOPSK	Mop Sink

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
MOPSKCNR	Corner Mop Sink
MTLDTR	Metal Detector
MTLLPL	Metal Lath and Plaster
MTLSHT	Metal Sheet and all Metals (Small Scale)
ORISTB	Oriented Strand Board
OVHDDR10	Overhead Door - 10 ft
OVHDDR12	Overhead Door - 12 ft
OVHDDR14	Overhead Door - 14 ft
OVHDDR16	Overhead Door - 16 ft
OVHDDR8	Overhead Door - 8 ft
OVHDDR9	Overhead Door - 9 ft
PARTBD	Particleboard
PLASTC	Plastic Finishes
PLPLLS	Large Scale Plastic on Plywood
PLPLSS	Small Scale Plastic on Plywood
PLYWLS	Large Scale Plywood
PLYWSS	Small Scale Plywood
RBILS	Rigid Board on Interior Insulation, Large Scale
RBISLS	Insulation, Rigid Board as Sheathing (Lg. Scale)
RFDRN	Roof Drain
ROMID3	Room Identifier, 3 char.
ROMID4	Room Identifier, 4 char.
ROTDOR108	Rotating Door - 108" Diameter
ROTDOR120	Rotating Door - 120" Diameter
ROTDOR60	Rotating Door - 60" Diameter
ROTDOR72	Rotating Door - 72" Diameter
ROTDOR84	Rotating Door - 84" Diameter
ROTDOR96	Rotating Door - 96" Diameter
SDIRLD	Stair Direction Line Down
SDIRLU	Stair Direction Line Up

SGLDRR24	Single Door (Right) - 24"

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
SGLDRR27	Single Door (Right) - 27"
SGLDRR30	Single Door (Right) - 30"
SGLDRR32	Single Door (Right) - 32"
SGLDRR36	Single Door (Right) - 36"
SGLDRR40	Single Door (Right) - 40"
SGLDRR42	Single Door (Right) - 42"
SGLDRR44	Single Door (Right) - 44"
SGLDRR46	Single Door (Right) - 46"
SGLDRR48	Single Door (Right) - 48"
SGLDRR50	Single Door (Right) - 50"
SGLDRR52	Single Door (Right) - 52"
SGLDRR54	Single Door (Right) - 54"
SGLDRR56	Single Door (Right) - 56"
SGLDRR58	Single Door (Right) - 58"
SGLDRR60	Single Door (Right) - 60"
SHWRCO	Corner Shower
SHWRHD	Shower Head
SHWROG	Shower Overhead Gang
SHWRPG	Shower Pedestal Gang
SHWRST	Shower Stall
SIGN	Wayfinding
SINKDBLCT	Double Bowl Countertop
SINKSCT	Single Bowl Countertop
SLDBLDRREC108	Recessed Sliding Door 108"
SLDBLDRREC120	Recessed Sliding Door 120"
SLDBLDRREC132	Recessed Sliding Door 132"
SLDBLDRREC144	Recessed Sliding Door 144"
SLDBLDRREC156	Recessed Sliding Door 156"
SLDBLDRREC72	Recessed Sliding Door 72"
SLDBLDRREC84	Recessed Sliding Door 84"
SLDBLDRREC96	Recessed Sliding Door 96"
SLDBLDRSURF108	Surface Mount Sliding Door 108"
SLDBLDRSURF120	Surface Mount Sliding Door 120"
SLDBLDRSURF132	Surface Mount Sliding Door 132"
SLDBLDRSURF144	Surface Mount Sliding Door 144"
SLDBLDRSURF156	Surface Mount Sliding Door 156"
SLDBLDRSURF72	Surface Mount Sliding Door 72"
SLDBLDRSURF84	Surface Mount Sliding Door 84"
SLDBLDRSURF96	Surface Mount Sliding Door 96"
SLDRREC36	Single Recessed Mount Sliding Door - 36"
SLDRREC42	Single Recessed Mount Sliding Door - 42"
SLDRREC48	Single Recessed Mount Sliding Door - 48"
SLDRREC54	Single Recessed Mount Sliding Door - 54"
SLDRREC60	Single Recessed Mount Sliding Door - 60"
SLDRREC66	Single Recessed Mount Sliding Door - 66"
SLDRREC72	Single Recessed Mount Sliding Door - 72"
SLDRREC78	Single Recessed Mount Sliding Door - 78"
SLDRSURF36	Single Surface Mount Sliding Door - 36"
SLDRSURF42	Single Surface Mount Sliding Door - 42"
SLDRSURF48	Single Surface Mount Sliding Door - 48"
SLDRSURF54	Single Surface Mount Sliding Door - 54"

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
SLDRSURF60	Single Surface Mount Sliding Door - 60"
SLDRSURF66	Single Surface Mount Sliding Door - 66"
SLDRSURF72	Single Surface Mount Sliding Door - 72"
SLDRSURF78	Single Surface Mount Sliding Door - 78"
SLOPE	Direction of Line Slope
SNK2BD	Double Bowl Sink
SNK2CT	Two Compartment Sink
SNKCWT	Circular Wash Type Sink
SNKDSP	Sink Disposer
SNKFRC	Flushing Rim Clinical Sink
SNKGEN	General Sink
SNKKLR	Kitchen Sink
SNKLDB	Sink w/Left Drainboard
SNKLTR	Sink Laundry Tray
SNKSCW	Semi-Circular Wash Sink
SNKSLP	Slop-Type Sink
SNKSRV	Service Sink
SNKSSC	Surgeon Scrub Sink
STLCSS	Structural Clay Tile, Small Scale
SUSPNT	Suspension Tee
TC1FLS	Terra Cotta Glazed 1 Face (Large Scale)
TC2FSS	Terra Cotta Glazed 2 Faces (Small Scale)
TCHOLW	Hollow Terra Cotta
TCLS	Large Scale Terra Cotta
TCQLS	Terra Cotta Quarry
TCUGLS	Terra Cotta Unglazed (Large Scale)
TCVENR	Veneer Terra Cotta
THRSHD	Threshold
TILFSS	Small Scale Tile Facing
TILGSC	Glazed Structural Clay Tile Masonry
TILSFU	Tile Structural Floor Units
TLACOU	Acoustical Tile Finishes
TLCRLS	Ceramic Tile Finish Large Scale
TRAY1L	Single Laundry Tray
TRAY2L	Double Laundry Trays
TRSHRECEP	Trash Receptacle (Big Silver)
URFM	Floor Mounted
URNLCO	Corner Type Urinal
URNLPD	Pedestal Type Urinal
URNLST	Urinal Stall
URNLTR	Trough Type Urinal
URNLWH	Wall Hung Urinal
URWM	Wall Mounted
WALLID	Wall Type Identifier
WCELWH	Electric Wall Hung Water Cooler
WCFM	Floor Mounted
WCFVFO	FV Flr Outlet Watercloset
WCFVWH	FV WH Watercloset
WCINTTNK	Integral Tank
WCITNK	Integral Tank Watercloset
WCTANK	Tank Type Watercloset

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
WCTNKFM	Tank Floor Mounted
WCTNKWM	Tank Wall Mounted
WCWHTN	WH Tank Watercloset
WCWM	Wall Mounted
WDFLBD	Wood Floor Board
WDFNOS	Wood Finish on Studs
WDFRAM	Continuous Wood Framing
WDSHSD	Wood Shingles Siding
WFINSH	Wood Finish
WINAWN	Window Awning
WINBAY	Projected Bay Window
WINBOW	Projected Bow Window
WINBOX	Projected Box Window
WINDCI	Window Double Casement Inward Open
WINDCN	Windcone
WINDCO	Window Double Casement Outward Open
WINDH	Double Hung Window
WINFIX	Fixed 1 Foot Window
WINID	Window Identifier
WINJAL	Jalousie Window
WINOSL	Sliding Window Left Operating Sash
WINOSR	Sliding Window Right Operating Sash
WINPIV	Pivot Window
WINSCL	Window Single Casement Left Jamb Hinge
WINSCR	Window Single Casement Right Jamb Hinge
WINSH	Single Hung Window
WOODHB	Hardboard Wood
WSHRBP	Bedpan Washer
WTRPFF	Waterproofing Felt Flashing
XRAYEQ	X-Ray Equipment

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
ACPNL	Access Control Panel
BIOACC	Biometric
CAMCM	Ceiling Mounted
CAMRM	Roof Mounted
CAMWM	Wall Mounted
CRACC	Card Reader
CVRTALRM	Panic Alarm
EMERDUR	Emergency Duress Unit
GRDROD	Grounding Rod
KPACC	Key Pad
MICPHN	Microphone
MONCRTCM	CRT - Ceiling Mounted
MONCRTCM	CRT - Ceiling Mounted
MONCRTCON	CRT - Console Mounted
MONCRTCON	CRT - Console Mounted
MONCRTWM	CRT - Wall Mounted
MONCRTWM	CRT - Wall Mounted
MONLCDCM	LCD - Ceiling Mounted
MONLCDCM	LCD Flat Screen - Ceiling Mounted
MONLCDCON	LCD - Console Mounted
MONLCDCON	LCD Flat Screen - Console Mounted
MONLCDWM	LCD - Wall Mounted
MONLCDWM	LCD Flat Screen - Wall Mounted
PAGETEL	Paging System Phone
PUBTEL	Public Pay Phone
RECDC	Data Communication Wall Receptacle
RECDCF	Data Communication Floor Receptacle
RECTDF	Telephone/Data Floor Receptacle
RECTDW	Telephone/Data Wall Receptacle
RECTEF	Telephone Floor Receptacle
RECTEL	Telephone Wall Recep.
SPKRCM	Ceiling Mounted
SPKRWM	Wall Mounted
TBOOTH	Telephone Booth

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
AIRFLD	Airfield Symbol
ARRPT	Parking Turn Arrow
ARRSD	Straight Direction Arrow
ARRST	Straight and Turn Arrow
BREAK	Break Line Symbol
BUOY	Buoy
CATBSN	Catch Basin
CATBSR	Round Catch Basin
CDHDR	Core Drill Hole Drilled
CDHUDR	Core Drill Hole Undrilled
CLNOUT	Cleanout
CNR90	Corner Solid 90
CNRSF	Corner Solid Flat
CNTLIN	Centerline Symbol
COGRAV	Center of Gravity
CULVEE	Culvert End
DBLARR	Dble Arrow Terminator
DRLHOL	Drill Hole
ECRD	Rock Dam Sediment Trap
ERSBD	Staw Bale Dam
ERSCTD	Sediment Ctrl Temp Div
ERSF	Silt Fence
ERSFRO	Silt Fence Rock Overflow
ERSOST	Stone Outlet Sed Trap
ERTGCE	Construction Entr Exit
FLARRL	Flow Arrow Left in 0 Pt.
FLARRR	Flow Arrow Right in 0 Pt.
FOMETR	Fuel Oil Meter
FOMHOL	Fuel Oil Manhole
FOVALT	Fuel Oil Vault
GREASE	Grease Trap
GRITCH	Grit Chamber
GSMETR	Gas Meter
GSPLNT	Gas Plant
GSRECR	Gas Receiver
GSTRAP	Gas Trap
GSVALT	Gas Valve Vault
HEADWL	Headwall
HNDCAP	Handicap Chair Symbol
HORCPT	Horizontal Control Point
HOVCPT	Horiz. Vert. Control Point
HUREYE	Hurricane Eye
HYDRNT	Hydrant
INSHWY	Interstate Hwy Symbol
IWMETR	Industrial Waste Water Meter
IWMHOL	Industrial Waste Water Manhole
JNBX	Junction Box
MONWEL	Monitoring Well
PHOCPT	Photo Control Point
PIINFO	PI Information
PIVALV	Post Indicator Valve

# APPENDIX E - STANDARD SYMBOLS

Symbol_Name	Description
PMPSTA	Pump Station
RGVALV	Regulator Valve
RRSIGN	Rail Signal
RRSWTC	Rail Switch
SCNRH	Section Corner Hatched
SCNRO	Section Corner Open
SDMHOL	Storm Drainage Manhole
SHRUBC	Shrub, Coniferous
SHRUBD	Shrub, Deciduous
SIGN	Sign
SNMHOL	Sanitary Manhole
SNPVSL	Sanitary Pressure Vessel
SNVALT	Sanitary Valve Vault
SPOTEL	Ground Spot Elevation
SPTANK	Septic Tank
STHWY	State Highway Symbol
STMPIT	Steam Pit
SWAMP	Swamp
TIDEG	Tide Gage
TIRETR	Tire Treddle
TNKBG	Tank, Below Ground
TNKHAG	Tank, Horizontal Above Ground
TNKVAG	Tank, Vertical Above Ground
TRACR	Traffic Arm w/Card Reader
TRAMS	Traffic Arm, Mechanical Swing
TREEC	Tree, Coniferous
TREED	Tree, Deciduous
TREEG	Tree, Generic
USHWY	US Highway Symbol
VCDATA	Vertical Curve Data
VERCPT	Vertical Control Point
WAHHOL	Water Handhole
WAMETR	Water Meter
WAPLNT	Water Plant
WASOFT	Water Softener
WAVALT	Water Valve Vault

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
1DIR	Direction Arrow
2DIR	Double Direction Arrow
2WAYMC	2-Way Radio Mic.
ACCBIO	Biometric Access Control
ACLEL	Elevated Approach Lightbar
ACLSF	Semiflush Approach Lightbar
AEDDEV	Automatic Electronic Defibrillator (A.E.D.)
AERROD	Aerial Rod
AFBCN	Airfield Beacon
ANNUN	Annunciator
ANNUNT	Local Control Annunciation Unit
ARREST	Lightning Arrestor
AUDIO	Audio
AUTOTRSW	Electric Automatic Transfer Switch
BARMKR	Barrier Marker
BATTERY	Battery
BEAM	Bi-Static Beam Sensor
BELL	Bell
BIORDR	Biometrics Access Ctrl.
BUTTON	Button
BUZZER	Buzzer
CAMFXD	Camera
CAMPTZ	Camera w/P/T/Zoom
CAPCTR	Capacitor
CARDRD	Card Reader
CBDOUT	Drawout Circuit Breaker
CBMCAS	Molded Case Circuit Breaker
CELLTX	Cellular Transmitter
CHIME	Chime
CKTID	Circuit ID Symbol
CLOCKW	Clock Outlet, Wall Mounted
CMHLN	New Communication Manhole
CMHLX	Existing Communication Manhole
COMPANL	Communication Panel
CPLTM	Circuit Line Terminator
CPREC2	Cathodic Protection Rectifier
CPSAN	Cathodic Protection Sacrificial Anode
CPTST	Cathodic Protection Test Station
CPU	Central Processing Unit
CRDRDR	Card Access Reader
CTRLPL	Control Panel
DBID	Ductbank ID Symbol
DGUYN	New Downguy
DGUYR	To Be Removed Downguy
DOROPN	Electric Door Opener
DORREV	Revolving Door
DSTMKR	Runway Distance Marker
DTHL	Displaced Threshold Light
DXFMR	Dry Type Transformer
EHLN	New Electrical Handhole
EHLX	Exist. Electrical Handhole

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
ELBP1BCM	Single Bulb - Ceiling Mounted
ELBP1BWM	Single Bulb - Wall Mounted
ELBP1L	1 Lamp Emergency Light
ELBP2BCM	Two Bulb - Ceiling Mounted
ELBP2BWM	Two Bulb - Wall Mounted
ELBP2L	2 Lamp Emergency Light
ELBP3BCM	Three Bulb - Ceiling Mounted
ELBP3BWM	Three Bulb - Wall Mounted
ELBP3L	3 Lamp Emergency Light
ELLOCK	Electronic Lock
EMHLN	New Electrical Manhole
EMHLX	Exist. Electrical Mahole
EPBXN	New Electrical Pullbox
EPBXX	Exist. Electrical Pullbox
ERECPT	Emergency Receptacle
EXITCM	Ceiling Mounted
EXITCM	Ceiling Mtd. Exit Light
EXITDV	Exit Device
EXITLF	Exit Sign, Lighted Face
EXITWM	Wall Mounted
EXITWM	Wall Mounted Exit Sign Light
FAN	Ceiling Fan
FIBMOD	Fiber Optic Module
FIXSPB	Surface Pendant Battery Fixture
FIXSPQ	Surface Pendant Battery Quartz Restrike
FIXSPR	Surface Pendant Battery Receptacle
FIXWM	Wall Mounted Fixture
FIXWMB	Wall Mounted Battery Fixture
FL14WB	1 X 4 Wall Mounted Fixture w/Battery
FL14WM	1 X 4 Wall Mounted Fixture
FL1X4	1 X 4 Light Fixture
FL1X4B	1 X 4 Light Fixture w/Battery
FL1X4C	1 X 4 Light Fixture, Continuous
FL2X2	2 X 2 Light Fixture
FL2X2B	2 X 2 Light Fixture w/Battery
FL2X2C	2 X 2 Light Fixture, Continuous
FL2X4	2 X 4 Light Fixture
FL2X4B	2 X 4 Light Fixture w/Battery
FL2X4C	2 X 4 Light Fixture, Continuous
FLDPNL	Field Panel
FLTN	New Floodlight
FLTR	To Be Removed Floodlight
FLTX	Existing Floodlight
FUELSOSW	Fuel Shutoff Switch
FUSRAT	Fuse with Rating
GENRTR	Electric Generator
GENRTR	Generator
GLASBR	Glass Breakage Sensor
GRDROD	Grounding Rod
GROUND	Earth Ground
HAS1H	1 Hot Leg

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
HAS1N	1 Neutral Leg
HAS1S	1 Switch Leg
HAS2H	2 Hot Legs
HAS2S	2 Switch Legs
HAS3HN	3 Hot, 1 Neutral Leg
HAS3MK	Hot/Neutral/Ground
HAS3S	3 Switch Legs
HAS4MK	2 Hot/Neutral/Ground
HAS5MK	3 Hot/Neutral/Ground
HASGND	1 Ground Leg
HEDASW	Aerial Service Weather Head
HLL	Hoverlane
HLLL	Hoverlane Limit Light
HPIL	Helipad Inset Light
HPLEL	Elevated Helipad Perimeter Light
HPPLSF	Semiflush Helipad Perimeter Light
HRUN1	Home Run
HRUN2	Home Run
HRUN3	Home Run
INTCOM	Intercom
JNBX	Junction Box
JNBXWM	Wall Mtd. Junction Box
KEYBRD	Keyboard
KEYPAD	Keypad Device
KNR	Keyed Note Reference
KNRM	Keyed Note Reference
LEADER	Leader Line
LTPLN	New Light Pole
LTPLR	To Be Removed Light Pole
LTPLX	Existing Light Pole
MCCTR	Distribution Motor Control Center
MCPDP	Power Distribution Panel
METREL	Electrical Meter
MICROW	Outdoor Microwave
MONITR	Monitor
MOTDTRCM	Ceiling Mounted
MOTDTRWM	Wall Mounted
MOTION	Motion Detector
MOTRHP	Motor HP
OBSTRL	Obstruction Light
PAPI	PAPI Light Unit
PBFMC	Flush Mounted Panelboard Cabinet
PBFMC	Recessed Mount
PBSMC	Surface Mount
PBSMC	Surface Mounted Panelboard/Cabinet
PHOTO	Photoelectric Relay
POLEAR	Aerial Pole w/Guying
POLEID	Pole Ident. Symbol
PRINTR	Printer
PSHST1	One Pushbutton Station
PSHST2	Two Pushbutton Station

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
PSHST3	Three Pushbutton Station
PWRDVC	Power System Device
PWRSPY	Power Supply
RCNC	Normally Closed Relay Contact
RCNO	Normally Open Relay Contact
RDRKPD	Card Reader w/Keypad
RECDER	Recorder
RECDFM	Floor Outlet, Double Flush Mounted
RECDSM	Double Surf Mount Floor Outlet
RECDUP	Duplex Receptacle
RECLOS	Recloser Aerial Automatic
RECPT2	Special Receptacle
RECQUA	Quadraplex Receptacle
RECRAN	Receptacle Range
RECSDP	Switched Duplex Receptacle
RECSFM	Floor Outlet, Single Flush Mounted
RECSIN	Single Receptacle
RECSNS	Single Receptacle with Switch
RECSPR	Special Purpose Receptacle
RECSSM	Single Surf Mount Floor Outlet
REIL	Reil Light Unit
RELAY	Relay
RELYOP	Relay OP Coil
RESHTR	Elec. Resistance Heater
RWCLL	Runway Center Light
RWEL	Runway End Light
RWLEL	Elevated Runway Edge Light
RWLSF	Semiflush Runway Edge Light
S3ABC	3 Three Way Switches
SABC	3 Single Switches
SCRDEV	Screening Device
SECSA	Security Screen w/Alarm
SECSW	Security Window Screen
SECTAA	Sectionalizer Aerial Auto
SENGV	Generic Volumetric Sensor
SENULS	Ultrasonic Sensor
SES	Service Entrance Section (SES)
SFL	Sequenced Flasher Light
SHREDR	Document Destroyer
SLLN	New Streetlight
SLLR	To Be Removed Streetlight
SLLX	Existing Streetlight
SLREG	Constant Current Transformer
SM	Motor Switch
SOUNDS	Sound System
STP14	1 X 4 Strip, Surface Pendant Recessed
STP14B	1 X 4 Strip, Surface Pendant Recessed w/Battery
STP18	1 X 8 Strip, Surface Pendant Recessed
STP18B	1 X 8 Strip, Surface Pendant Recessed w/Battery
SUBSTA	Substation
SWFLNC	Normally Closed Float Switch

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
SWFLNO	Normally Open Float Switch
SWFNC	Normally Closed Flow Switch
SWFNO	Normally Open Flow Switch
SWFONC	Normally Closed Foot-Operated Switch
SWI2WY	Double Pole Switch
SWI3WY	Three Way Switch
SWI4WY	Four Way Switch
SWICB	Circuit Breaker
SWICHA	Auto. Monitor. Switch
SWICHM	Man. Operated Switch
SWIDIS	Disconnect Switch
SWIDM1	Dimmer
SWIDM2	Dimmer Switch
SWIDUR	Duress Switch
SWIFUS	Fused Switch
SWIKEY	Key-Operated Switch
SWILVM	Low Voltage Master Switch
SWITCH	Single Pole Switch
SWITIM	Timer Operated Switch
SWLAMP	Lamp Holder Pole Switch
SWLNC	Normally Closed Limit Switch
SWLNO	Normally Open Limit Switch
SWMULT	Multiposition Switch
SWPADN	New Switchpad
SWPADX	Existing Switchpad
SWPCM	Ceiling Mounted Pull Switch
SWPCOI	Pressure Switch-Close on Increase
SWPOOI	Pressure Switch-Open on Increase
SWSBRK	Single Break Switch
SWTANC	Normally Closed Temp Activated Switch
SWTANO	Normally Open Temp Activated Switch
SWTDNC	Normally Closed Time Delay Switch
SWTDNO	Normally Open Time Delay Switch
TARDR	Card Reader w/Time/Att.
TDZL	Touchdown Zone Light
TELEDL	Telephone Dialer
THINGE	Power Transfer Hinge
THL	Threshold Light
TOWER	Transmission Tower
Transmit Unit	
TRFARM	Traffic Arm.
TRFCLP	Vehicle Loop Detector
TRFSIG	Traffic Signal Mast Arm.
TRNSTL	Turnstile
TSCTRL	Traffic Signal Controller
TSHEAD	Traffic Signal Head
TSPBX	Traffic Signal Pullbox
TSPHS	Traffic Signal Phase #, Thru.
TSPHT	Traffic Signal Phase #, Turn.
TSTAT	Thermostat
TSVLDT	Traffic Signal Vehicle Loop Detector

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
TVOUT	Television Outlet
TWCLL	Taxiway Centerline Light
TWELEL	Elevated Taxiway End Light
TWELSF	Semiflush Taxiway End Light
TWGSGN	Taxiway Guidance Sign
TWLEL	Elevated Taxiway Edge Light
TWLSF	Semiflush Taxiway Edge Light
UTPLN	New Pole
UTPLR	To Be Removed Pole
UTPLX	Existing Pole
VIDCR	Camera w/Card Reader
VIDCTL	Video Control Keyboard
VIDIC	Video Intercom
VIDICM	Video Intercom Master
VIDKPD	Camera w/Keypad
VIDMTN	Video Motion Detector
VIDMUX	Video Multiplexer
WINDCN	Windcone
WYECON	XFMR Wye Connection
WYEXGC	XFMR Grounded Connection
XFRPLN	New XFMR Pole
XFRPLR	To Be Removed XFMR Pole
XFRPLX	Existing XFMR Pole
XFRPMN	New XFMR Pad
XFRPMR	To Be Removed XFMR Pad
XFRPMX	Existing XFMR Pad
XMFRELEV	Transformer - Elevated
XMFRPFM	Transformer - Floor/Pad Mounted
XMFRVT	Transformer - Vault

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
1DIR	Direction Arrow
ABCEXT	ABC Type - Dry Chemical
ABORT	Abort Switch
ACCESS	Fire Department Access
AGSTCN	Agent Storage Container
AIRCOMPR	Air Compressor
ALMCOMBCM	Ceiling Mounted Audible with Integral Strobe
ALMCOMBWM	Wall Mounted Audible with Integral Strobe
AUDALMCM	Ceiling Mounted Audible Alarm
AUDALMWM	Wall Mounted Audible Alarm
BCEXT	BC Type - Dry Chemical
BELLFA	Bell (Gong)
BOILER	Boiler
CAEXT	Clean Agent or Halon
CHIMNY	Chimney
CO2AA	CO2 Automatically Actuated Extinguishing System
CO2EXT	Carbon Dioxide
CO2MA	CO2 Manually Actuated Extinguishing System
CODTR	Carbon Monoxide Detector - Wall Mount
CONSFS	Freestanding Siamese Fire Department Connection
CONSIDA	Siamese Fire Department Connection
CONSNG	Single Fire Department Connection
CPESR	Elevator Status/Recall
CPFAC	Fire Alarm Communicator
CPFCP	Fire Alarm Control Panel
CPFSA	Fire System Annunciator
CPFTR	Fire Alarm Transponder or Transmitter
CPHCP	Halon Control Panel
CPHVA	Control Panel for HVAC
DCATAA	All-Type Fire Extinguisher, Automatically Actuated
DCATMA	All-Type Fire Extinguisher, Manually Actuated
DCEABC	Dry Chemical Extinguisher (ABC-Type)
DCEBC	Dry Chemical Extinguisher (BC-Type)
DCECO2	CO2 Extinguisher
DCEHLN	Halon or Clean Agent Extinguisher
DCLGAA	Dry Chemical System Auto Act. (Liquid, Gas, Elec. Fires)
DCLGMA	Dry Chemical System Man Act. (Liquid, Gas, Elec. Fires)
DMPBAR	Barometric Damper
DMPFIR	Fire Damper
DMPFS	Fire/Smoke Damper
DMPSMK	Smoke Damper
DRHOLD	Door Holder
DRHOLD	Magnetic Hold Open Device
DTFLAM	Flame Detector
DTFLOW	Flow Detector/Switch
DTGAS	Gas Detector
DTLEVL	Level Detector/Switch
DTPRES	Pressure Detector/ Switch
DTTAMP	Tamper Detector
ELBP1L	1-Lamp Emergency Light, Battery Powered
ELBP2L	2-Lamp Emergency Light, Battery Powered

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
ELBP3L	3-Lamp Emergency Light, Battery Powered
EPSTA	Emergency Phone Station
ESCAPE	Fire Escape
EXFOAM	Foam Extinguisher
EXITCM	Ceiling Mounted Exit Sign Light
EXITLF	Exit Sign, Lighted Face
EXITWM	Wall Mounted Exit Sign Light
EXWATR	Water Extinguisher
FADA	Distributive Amplifier
FANDCT	Duct Fan
FANGEN	General Fan
FANWAL	Wall Fan
FAPB	Strobe Power Booster
FAPNL	Fire Alarm Panel
FDOR3	3-Hour Rated Fire Door in Wall
FDORL3	Wall w/<3-Hour Rated Door
FIREPUMP	Fire Pump
FOAMEXT	Foam
FPDRIV	Fire Pump w/Drives
FPFREE	Free Standing Test Header
FPTEST	Wall-Mtd. Test Header
FRR1HR	1-Hour Fire Resistance Rating
FRR2HR	2-Hour Fire Resistance Rating
FRR30M	30 Minute Fire Resistance Rating
FRR3HR	3-Hour Fire Resistance Rating
FRR45M	45 Minute Fire Resistance Rating
FRR4HR	4-Hour Fire Resistance Rating
FULLSS	Fully Sprinklered Space
HD	Heat Detector
HLNAA	Automatically Actuated Halon Extinguishing System
HLNMA	Manually Actuated Halon Extinguishing System
HOSECBTPED	Pedestal Mounted
HOSECBTREC	Wall Mounted - Recessed
HOSECBTSUR	Wall Mounted - Surface
HOSECS	Hose Station, Charged Standpipe
HOSEDS	Hose Station, Dry Standpipe
HRN1A	Horn w/Light, One Assembly
HRNMIN	Mini Horn
HRNSA	Horn w/Light, Separate Assembly
HRNSPK	Speaker/Horn (Electric Horn)
HTDTR	Heat Detector - Ceiling Mounted
HYDPR1	Private Hydrant, One-Hose Outlet
HYDPR2	Private Housed Hydrant, Two-Hose Outlets
HYDPU2	Public Hydrant, Two-Hose Outlets
HYDPUP	Public Hydrant, Two-Hose Outlets, Pumper Connection
HYDW2H	Wall Hydrant, Two-Hose Outlets
LIFAS	Light
MANSTA	Fire Alarm - Pull Station
MANSTA	Manual Station
METRFP	Meter
MNCHRG	Monitor Nozzle, Charged

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
MNDRY	Monitor Nozzle, Dry
NONSS	Non-Sprinklered Space
PARTSS	Partially Sprinklered Space
PURGE	Manual Purge Control
RISER	Riser
RSCO2	CO2 Reel Station
RSDRYC	Dry Chemical Reel Station
RSFOAM	Foam Reel Station
SD –Smoke Detector	
SDTRCM	Smoke Detector - Ceiling Mounted
SDTRDM	Smoke Detector - Duct Mounted
SDTRWM	SMOKE DETECTOR - Wall MOUNTED
SDUCT	Smoke Detector for Duct
SHGARD	Sprinkler Head w/Guard
SHUUU	Nippled Up Upright Sprinkler Head
SHOUT	Outside Sprinkler Head
SHPEND	Pendent Sprinkler Head
SHPNNDN	Pendent Sprinkler Head, on Drop Nipple
SHSIDE	Sidewall Sprinkler Head
SHUPRT	Upright Sprinkler Head
SMKBAR	Smoke Barrier
SSNOZZ	Special Spray Nozzle
STRBCM	Ceiling Mounted Strobe
STRBWM	Wall Mounted Strobe
THRUST	Thrust Block
TNKBG	Tank, Below Ground
TNKHAG	Tank, Horizontal Above Ground
TNKVAG	Tank, Vertical Above Ground
VLVCHA	Alarm Check Valve
VLVCHK	Check Valve
VLVDEL	Deluge Valve
VLVDRY	Dry Pipe Valve
VLVIBF	Indicating Butterfly Valve
VLVKEY	Key-Operated Valve
VLVNON	Nonindicating Valve (Nonrising Stem)
VLVOSY	OS&Y Valve
VLVPI	Post Indicator Valve
VLVPIT	Valve in Pit
VLVPRE	Preaction Valve
VLVQOD	Dry Pipe Valve, w/Quick Opening Device
VLVTDS	Valve w/ Tamper Detector/Switch
VNTOPN	Ventilation Openings
WALARM	Water Motor Alarm
WATRSS	Water Spray System
WBDSMA	Water-Based Dry System Manually Actuated
WBDSSA	Water-Based Dry System Automatically Actuated
WBFSAA	Water-Based Foam System Automatically Actuated
WBFSMA	Water-Based Foam System Manually Actuated
WBWSAA	Water-Based Wet System, Automatically Actuated
WBWSMA	Water-Based Wet System, Manually Actuated

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
BREAK	Break Line Symbol
CNTLIN	Centerline Symbol
COLLIN	Column Line/Grid Indicator
DBLARR	Double Arrow Terminator
DTLIND	Detail Indicator
KEYIND	Keynote Indicator
MAGNOR	Magnetic North Arrow
MATIND	Match Line Indicator
NORIND	North Indicator
NORNCS	North Indicator (NCS)
NORTH1	North Indicator
NORTH2	North Indicator
NOTIND	Note Indicator
REVID1	Revision Indicator, 1 Char
REVID2	Revision Indicator, 2 Char
S0001	Scale 1 : 1
S0005	Scale 1 : 5
S0000B	Scale 1" = 1"
S00010	Scale 1 : 10
S0001B	Scale 1" = 1'-0"
S0001G	Scale 1" = 1'-0"
S00020	Scale 1 : 20
S0003B	Scale 3" = 1'-0"
S0003G	Scale 3" = 1'-0"
S00050	Scale 1 : 50
S0005B	Scale 1" = 5'
S0005G	Scale 1" = 5'
S0006B	Scale 6" = 1'-0"
S0006G	Scale 6" = 1'-0"
S00100	Scale 1 : 100
S0010B	Scale 1" = 10'
S0010G	Scale 1" = 10'
S0012B	Scale 1/2" = 1'-0"
S0012G	Scale 1/2" = 1'-0"
S0014B	Scale 1/4" = 1'-0"
S0014G	Scale 1/4" = 1'-0"
S0015B	Scale 1-1/2" = 1'-0"
S0015G	Scale 1-1/2" = 1'-0"
S0016B	Scale 1/16" = 1'-0"
S0016G	Scale 1/16" = 1'-0"
S0018B	Scale 1/8" = 1'-0"
S0018G	Scale 1/8" = 1'-0"
S001KB	Scale 1:1000

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
ANCHOL	Angle Cored Hole (Arrow=Dir)
ANTICL	Anticline
BHHNUM	Backhoe Hole Number
BOLOGR	Boring Log Refusal
BORLOG	Boring Log Sheet
CCHNUM	Concrete Core Hole Number
CDRDSH	Consolidated-Drained Direct Shear
CONDRA	Consolidated Drained
CONSOL	Consolidation
CONTST	Consolidation Test
CONUDR	Consolidated Undrained
CPNHOL	Cone Penetrometer Hole
CUDRTT	Consolidated-Undrained Triaxial Test
DSCHIC	Boring w/Inclinometer
DSCHOL	Drive Sampled (SPT) and Cored
DSCHPT	Drive Sampled (SPT) and Cored Hyd. Pressure Tested
DSCHPZ	Drive Sampled (SPT) and Cored w/Piezometer
DSCPZT	Drive Sampled (SPT) and Cored Hyd Test Piezometer
DSHOL	Drive Sample (SPT) Hole
DSHPZ	Disturbed Sample Boring w/Piezometer
FBLCK1	Fault Block Movement 1
FBLCK2	Fault Block Movement 2
FDRAIN	Foundation Drain
HAHNUM	Hand Auger Hole Number
HANGF1	High Angle Fault 1
HANGF2	High Angle Fault 2
HDHNUM	Hand Dug Hole Number
HEXAGN	Hexagon Symbol
HOLNUM	Hole Number, Elevation, Offset
HRZBED	Horizontal Beds
ICCSNG	Inclinometer Casing
MOISTC	Moisture Content
NSAHOL	Nonsampled Area of Hole
OBSHOL	Piezometer or Observation Hole
OPBLOG	Open Boring Log
PAHNUM	Power Auger Hole Number
PIEZOM	Piezometer
PROPEX	Proposed Exploration
PTHNUM	Perc Test Hole Number
PZABD	Abandoned Piezometer
PZUNIT	Piezometer Sensing Unit
RDHNUM	Rotary Drill Hole Number
RFWELL	Relief Well
RSLASH	Refusal Slashes
SAMPLE	Sample
SDIJNT	Strike Dip of Inclined Joint
SQUARE	Square Symbol
STKLNG	Sticklog Legend
STKLOG	Sticklog
STRKDP	Strike Dip
STRKVJ	Strike of Vertical Joint

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
STRKVP	Strike w/Vertical Dip
SYNCLN	Syncline
TPIOB	Test Pit in Overburden
TRIANG	Triangle Symbol
TSTHOL	Test Hole Symbol
TTIOB	Test Trench in Overburden
UCELL	Uplift Cell
UCONUD	Unconsolidated Undrained
UCONUT	Unconsolidated-Undrained Triaxial Test
UDENIS	Undisturbed Denison or Push
UDUNPZ	Undisturbed Sample Boring Piezometer
ULIMIT	Unsatisfactory Limit
VCHHPT	Vertical Core Hole Hyd. Pressure Tested
VCHOL	Vertical Core Hole
VHNUM	Vibracore Hole Number
WASHBR	Washbored
WBHNUM	Wash Boring Hole Number
WLEVDL	Water Level Date Left
WTRLEV	Water Level

## APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
AIRQST	Air Quality Monitoring Station
AIRSMP	Air Sample Location
BIOSMP	Biological Sample Location
EGDECN	Equip. Decontamination
EGONST	Onsite Command Post
EGSITE	Site Information Center
EGWASH	Washdown Water Tank
EHZMSA	Hazmat Storage Location
EHZMSB	Hazmat Storage Building
EHZMSR	Hazmat Storage Room
EHZMSV	Hazmat Storage Vault
EHZWSA	Hazwaste Storage Location
EHZWSB	Hazwaste Storage Building
EHZWSR	Hazwaste Storage Room
EHZWSV	Hazwaste Storage Vault
EMGSHW	Emergency Shower
EPOLLS	Pollution Source Site
EYEWAS	Emergency Eyewash
GWTQST	Groundwater Quality Monitoring Station
LANGAS	Landfill Gas Monitor Probe
MAGLOC	Magnetometer Det. Locat
MATSMP	Solid Material Sample Location
PRLLOC	Potential Release Location
RESTR	Restricted Access
SEDSMP	Sediment Sample Location
SOLGAS	Soil Gas Monitoring Probe
SOLSMP	Soil Sample Location
SPLRES	Spill Response
SPLTNK	Spill Containment Tank
SURSMP	Surface Water Sample LocD
SWTQST	Surface Water Quality Monitoring Station
WASSMP	Waste Sample Location
WATSMP	Groundwater Sample LocD

# APPENDIX E - STANDARD SYMBOLS

Symbol_Name	Description
ACCDOR	Duct Access Door
AGUIDE	Alignment Guide
AIRELM	Air Eliminator
AIRIN	Air In
AIRSEP	Air Separator
ANCHRI	Anchor
AVENTA	Automatic Air Vent
AVENTM	Manual Air Vent
BALLJT	Ball Joint
BUSHSC	Bushing
CAPSC	Cap
CAPTUB	Capillary Tube
CDRND	Round Ceiling Diffuser
CDSQR	Square Ceiling Diffuser
CFM2X3	Airflow CFM
CFM2X4	Airflow CFM
CFM3X4	Airflow CFM
CO2DTR	Carbon Dioxide Detector - Wall mount
COCKSC	Cock
CREDESC	Concentric Reducer
CRSRSC	Cross
CUPJNT	Coupling Joint
DCTHTR	Electric Duct Heater
DMPEOC	Electric Operated Damper Control
DMPFIR	Fire Damper
DMPFS	Fire Smoke Damper
DMPPOD	Pneumatic Damper
DMPSMK	Smoke Damper
DPRSD	Duct Pressure Class Down
DPRSH	Duct Pressure Class Horiz
DPRSL	Duct Pressure Class Left
DPRSR	Duct Pressure Class Right
DPRSU	Duct Pressure Class Up
DPRSV	Duct Pressure Class Vert
DRIER	Drier
EEQ2X2	Electrical Equipment 2X2 Mark
EEQ2X3	Electrical Equipment 2X3 Mark
EEQ2X4	Electrical Equipment 2X4 Mark
EEQ3X2	Electrical Equipment 3X2 Mark
EEQ3X3	Electrical Equipment 3X3 Mark
EEQ3X4	Electrical Equipment 3X4 Mark
EL45SC	45 Degree Elbow
EL90SC	90 Degree Elbow
ELBSC	Base Elbow
ELDBSC	Double Branch Elbow
ELLRSC	Long Radius Elbow
ELODSC	Side Outlet Elbow, Outlet Down
ELOUSC	Side Outlet Elbow, Outlet Up
ELSTRT	Street Elbow
ELTDSC	Turned Down Elbow
ELTUSC	Turned Up Elbow

# APPENDIX E - STANDARD SYMBOLS

Symbol_Name	Description
EREDSC	Eccentric Reducer
EXPJNT	Expansion Joint
FANERV	Exhaust Roof Vent Fan
FANLRV	Louvered Roof Vent Fan
FANSRV	Intake Roof Vent Fan
FLBLND	Blind Flange
FLOW2	Air Flow Direction Arrow
FLRPEN	Iso. Floor Penetration
FLXCON	Flexible Connector
GAUGE	Gauge
GRILEX	Exhaust Grille
GRILSU	Supply Grille
HANGRD	Hanger Rod
HANGSP	Hanger Spring
HSENS	Humidity Sensor
HSTAT	Humidistat
LNDIFF	Linear Diffuser
LOOPL	Left Dimension Loop
LOOPR	Right Dimension Loop
LOUOPN	Door or Wall Louver Opening
O2DTR	Oxygen Detector - Wall Mount
PIDROP	Pitch or Pipe Drop
PIRISE	Pitch or Pipe Rise
PLGBFL	Bull Plug, Flanged
PLGPSC	Pipe Plug
PRGGCO	Pressure Gage and Cock
PSDIFF	Pump Suction Diffuser
PUMP	Pump
PUMPP	Pump (Schematic)
PUMPS	In-Line Pump
SCALET	Scale Trap
SLEEVE	Sleeve
STGLAS	Sight Glass
STRAIN	Strainer
STRBLO	Blow Off Strainer
SUPOUT	Supply Outlet (Wall Supply)
TDSSC	Double Sweep Tee
THERM	Thermometer
THERMW	Thermometer Well
THHRB	Thermostat, Remote Bulb
THHSC	Thermostat, Self Contained (HVAC)
THLPRS	Thermostat, Low Pressure
THMCP	Thermostat, Microprocessor
THPELE	Thermostat, Electric
THPPNE	Thermostat, Pneumatic
TMPSEN	Temperature Sensor
TODSC	Tee, Outlet Down
TOUSC	Tee, Outlet Up
TRAPFL	Float Trap
TRAPFT	Float and Thermostatic Trap
TRAPST	Steam Trap

# APPENDIX E - STANDARD SYMBOLS

Symbol_Name	Description
TRAPT	Thermostatic Blast Trap
TSODSC	Tee, Side Outlet, Outlet Down
TSOUSC	Tee, Side Outlet, Outlet Up
TSSC	Straight Size Tee
TSSWSC	Single Sweep Tee

LOOKTR	Lookout Watch Station
LTART	Articulated Light
LTBEAC	Lighted Beacon
LTBY	Lighted Buoy
LTBYBB	Lighted Black Barrel Buoy
LTFLD	Floodlight
LTFLT	Float Light
LTFLT1	Float Light IALA
LTFLT2	Float Light IALA
LTHOU1	Lighthouse
LTHOU2	Lighthouse
LTMAJ1	Major Floating Light
LTMAJ2	Major Floating Light
LTMARK	Lighted Marker
LTMIN2	Minor Floating Light
LTPLT1	Lighted Platform
LTPLT2	Lighted Platform
LTPLX	Existing Light Pole
LTSH1	Lighted Vessel Lightship
LTSH2	Lighted Vessel Lightship
LTSH3	Lighted Vessel Lightship
LTOW2	Lighted Beacon Tower
LTVES2	Unmanned Light Vessel
MARINA	Boat Harbor Marina
MARKGD	Green Day Marker
MARKRD	Red Day Marker
MEAST	Lighted East Marker Buoy
MNORTH	North Arrow
MONWEL	Monitoring Well
MORB	Mooring Buoy
MORBBB	Black Mooring Barrel Buoy
MORBBW	White Mooring Barrel Buoy
MORBCW	White Mooring Can Buoy
MORTWR	Mooring Tower
MOTRHP	Motor
MSOUTH	Lighted South Marker Buoy
MWEST	Lighted West Marker Buoy
NOTICE	Notice Board
NUN1	Nun Buoy
NUN2	Nun Buoy
NUNBT	Black Nun Buoy w/Topmark
NUNWT	White Nun Buoy w/Topmark
OBS	Obstruction
OBSSPT	Observation Spot
OBSTRL	Obstruction Light

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
ODAS	ODAS Data Collection Buoy
OUTB	Outfall Marking Buoy
PAPI	PAPI Light Unit
PHOCPT	Photo Control Point
PIINFO	PI Information
PIL1	Pillar Buoy
PIL2	Pillar Buoy
PILLT	Lighted Pillar Buoy
PILM	Multicolored Pillar Buoy
PILOT	Boarding Place
PILOT1	Pilot Office
PILOT2	Pilot Office
PILV	Vertical Stripe Pillar Buoy
PILVT	Vertical Stripe Pillar Buoy w/Topmark
PIPDIS	Disused Pipeline Pipe
PIPE	Water Sewer Outfall Intake
PIPE1	Oil Gas Pipeline
PIPE2	Oil Gas Pipeline
PIPES1	Oil Gas Pipeline Area
PIPES2	Oil Gas Pipeline Area
PIVALV	Post Indicator Valve
PLAT1	Prod Platform Oil Derrick
PLAT2	Prod Platform Oil Derrick
PLAT3	Prod Platform Oil Derrick
PMPSTA	Pump Station
POLE1	Pole Stake Perch
POLE3	Pole Stake Perch
POLEAR	Aerial Pole w/Guying
POLEID	Pole Identification Symbo
POLEP	Port Hand Stake Pole
POLES	Starboard Hand Stake Pole
PRIVB	Private Barrel Buoy
RADAR	Radar Station or Beacon
RADAR1	Floating Radar Beacon
RADAR2	Floating Radar Beacon
RADAR3	Floating Radar Beacon
RADAR4	Floating Radar Beacon
RADIO	General Radio Beacon
RADRF1	Radar Reflector or Feature
RADRF2	Radar Reflector or Feature
RANGEX	Range Extension
REEF	Coral Reef, Large Icon
REEF1	Coral Reef, Small Icon
REFUG1	Refuge Beacon
REFUG2	Refuge Beacon
REIL	Reil Light Unit
RESCUE	Rescue Station
RESPLT	Observation Research Platform
RGVALV	Regulator Valve
RSTAR	Range Star
RVMMOP	Open River Mile Marker

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
RVMMSO	Solid River Mile Marker
RWCLL	Runway Centerline Light
RWEL	Runway End Light
RWLEL	Elevated Runway Edge Light
RWLSF	Semiflush Runway Edge Light
SAFE1	Lighted Safe Water Mark
SAFE2	Lighted Safe Water Mark
SAFE3	Lighted Safe Water Mark
SCNRH	Section Corner Hatched
SCNRO	Section Corner Open
SCNRTO	Section Corner T Open
SDM	Surface Displ. Monument
SDMHOL	Storm Drainage Manhole <sup>4</sup>
SECCUT	Typical Section Cut
SFL	Sequenced Flasher Light
SHRUBC	Shrub, Coniferous
SIGBRG	Bridge Light Inc Traffic
SIGN	Sign
SIGNWS	National Weather Service Station
SIGSHO	Sub Signal Connect Shore
SIGST1	General Signal Station
SIGST2	General Signal Station
SIGSTP	Port Control Signal Station
SIGSUB	Submarine Signal
SIRLH1	Siren at Lighthouse
SIRLH2	Siren at Lighthouse
SLARRL	Slope Arrow w/ Enter Data Field
SLARRR	Slope Arrow w/ Enter Data Field
SLLX	Existing Street Light Luminaire
SLREG	Constant Current Transformer
SNMETR	Sanitary Meter
SNMHOL	Sanitary Manhole
SNPVSL	Sanitary Pressure Vessel
SNVALT	Sanitary Valve Vault
SP	Survey Pedestal
SPAR1	Spar Buoy Spindle Buoy
SPAR2	Spar Buoy Spindle Buoy
SPARB	Black Spar Buoy
SPARBT	Black Spar Buoy w/Topmark
SPARWT	White Spar Buoy w/Topmark
SPH1	Spherical Buoy
SPH2	Spherical Buoy
SPHD	Diagonal Stripe Spherical Buoy
SPHV	Vertical Stripe Spherical Buoy
SPHW	White Spherical Buoy
SPILE	Submerged Piling
SPILE1	Submerged Piles
SPILES	Submerged Piles
SPILEX	Submerged Pile w/Position
SPOST	Submerged Post
SPOSTX	Submerged Post w/Position

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
SPTANK	Septic Tank
SSLSTA	Sanitary Sewer Lift Station
STAKE	Stake Perch
STAKEX	Stake w/Position
STHWY	State Highway Symbol
STMPIT	Steam Pit
STUMPS	Submerged Stumps
SUBSTA	Substation
SUPER	Super Buoy
SUWEL2	Suspended Well, Depth Unknown
SUWEL3	Suspended Well, Depth Unknown
SUWELY	Suspended Well, Depth Known
SWAMP	Swamp
SWELB1	Submerged Well w/Buoy
SWELB2	Submerged Well w/Buoy
SWELL5	Submerged Prod Well
SWPADX	Existing Switch Pad
TDZL	Touchdown Zone Light
TELBBB	Black Telegraphic Barrel Buoy
THL	Threshold Light
TIDEG	Tide Gage
TIDSTF	Tide Staff
TIRETR	Tire Treddle
TNKBG	Tank, Below Ground
TNKHAG	Tank, Horizontal Above Ground
TNKVAG	Tank, Vertical Above Ground
TOW1	Beacon Tower
TOW2	Beacon Tower
TOW3	Beacon Tower
TOWB	Black Beacon Tower
TOWBT1	Black Beacon Tower w/Topmark
TOWBT2	Black Beacon Tower w/Topmark
TOWER	Transmission Tower
TOWW	White Beacon Tower
TOWWT1	White Beacon Tower w/Topmark
TOWWT2	White Beacon Tower w/Topmark
TREEC	Tree, Coniferous
TREED	Tree, Deciduous
TREEG	Tree, Generic
TRFSIG	Traffic Signal Mast Arm
TRIPNT	Triangulation Point
TRVALT	Transformer Vault
TSCTRL	Traffic Signal Controller
TSHEAD	Traffic Signal Head
TSPBX	Traffic Signal Pullbox
TSPHS	Traffic Signal Phase No., Thru
TSPHT	Traffic Signal Phase No., Turn
TSVLDT	Traffic Signal Vehicle Loop Detector
TWCLL	Taxiway Centerline Light
TWELEL	Elevated Taxiway End Light
TWELSF	Semiflush Taxiway End Light

# APPENDIX E - STANDARD SYMBOLS

Symbol Name	Description
TWGSGN	Taxiway Guidance Sign4
TWLEL	Elevated Taxiway Edge Light
TWLSF	Semiflush Taxiway Edge Light
USHWY	US Highway Symbol
UTPLX	Existing Pole
VCDATA	Vertical Curve Data
vCNRNF	Corner Not Found
VERCPT	Vertical Control Point
WAHHOL	Water Handhole
WAMETR	Water Meter
WAPLNT	Water Plant
WASOFT	Water Softener
WAVALT	Water Valve Vault
WEIR	Weir
WELL1	Wellhead, Above Water
WELL3	Wellhead, Above Water
WINDCN	Windcone
WITHYP	Port Hand Withy
WITHYS	Starboard Hand Withy
WRECK	Wreck, Not Dangerous
WRKDNG	Wreck, Danger Depth Unknown
WRKEXP	Wreck, Partly Exposed
XFRPLX	Existing Transformer Pole
XFRPMX	Existing Transformer Pad
